

Metagenomic insights into the microbial diversity of bauxite residues in the mining basin of Provence and the Marseille agglomeration

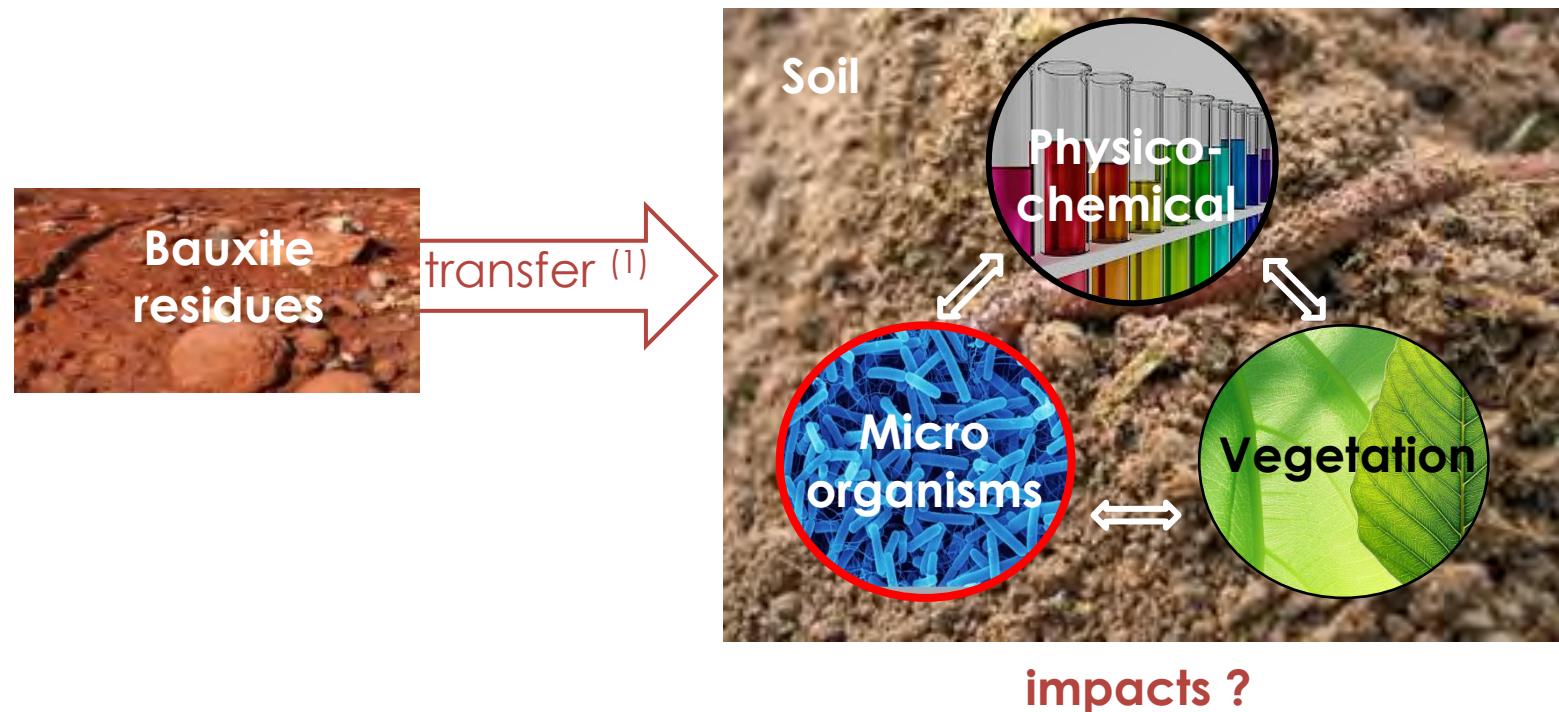

Julie Foulon, Mathieu Luglia, Héloïse Verdier, Camille Fourrier, Catherine Keller, Jean-Paul Ambrosi, Virgile Calvert, Daniel Pavon, Bernard Angeletti, Stéven Criquet

MARS Project

- MARS : Microbial diversity Assessment in Redmud Soils
- Study of microbial communities by **metabarcoding**
- in the continuity of the DORIS, REDMUD I & II Projects

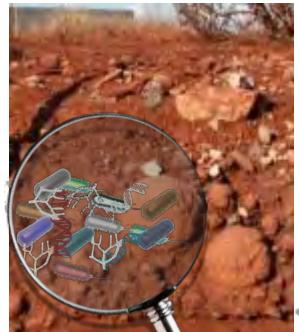

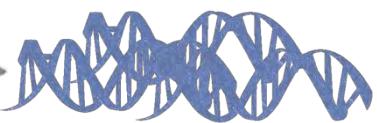

(1) : Jones et Haynes, 2011

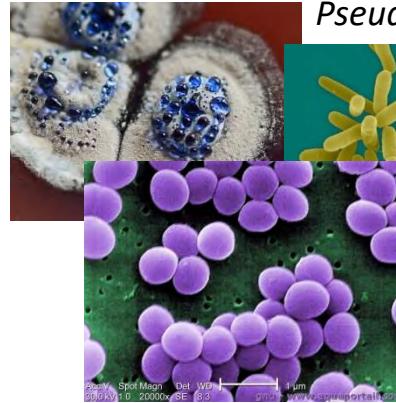

Material and Methods

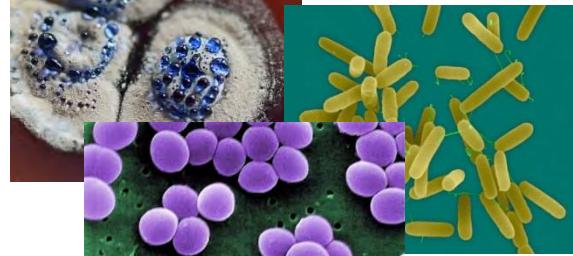

Extraction
Zymobiotics™ DNA Miniprep
(Zymo Research)

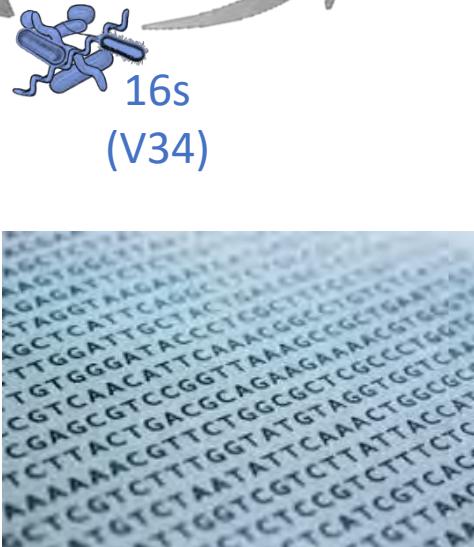

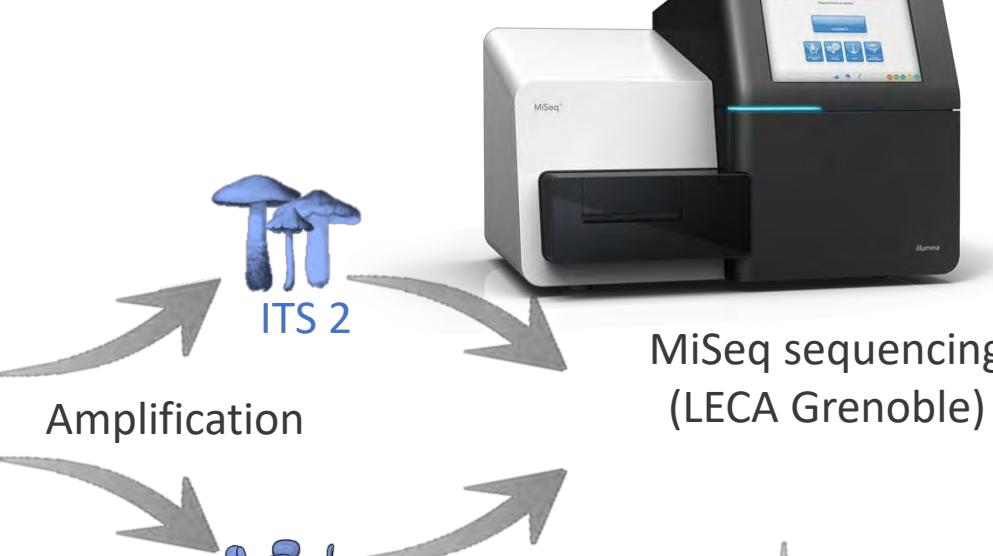

Streptomyces

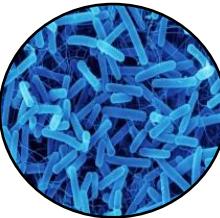

Pseudomonas

Staphylococcus

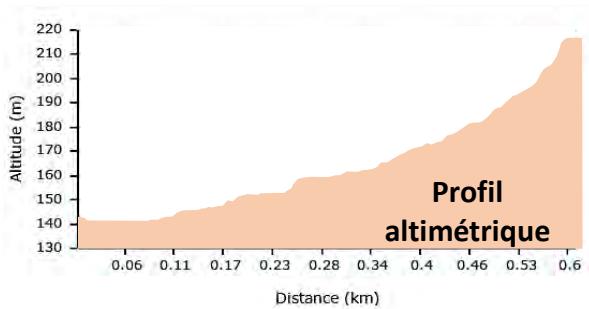

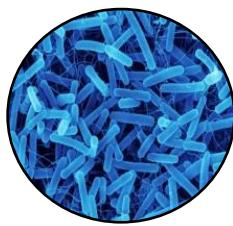

- 5,264,665 bacterial sequences
- 8,604,198 fungal sequences

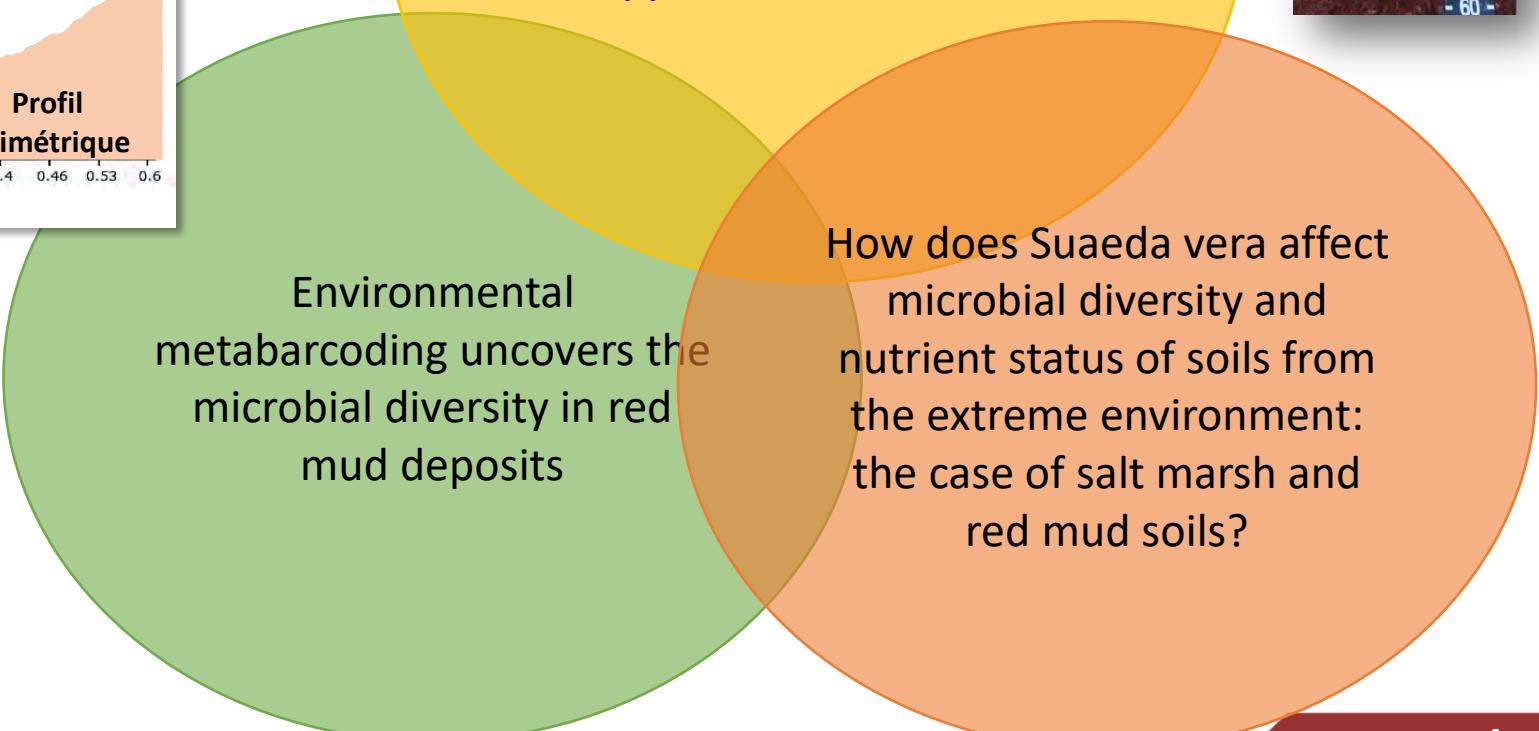

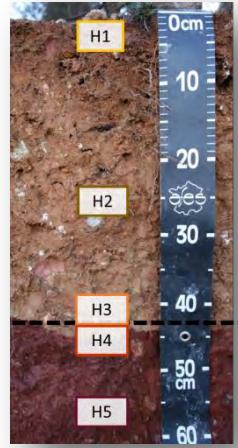

Journées Scientifiques :
"Bauxite Résidus"

Aix-en-Provence, du 08 au 09 juin 2021

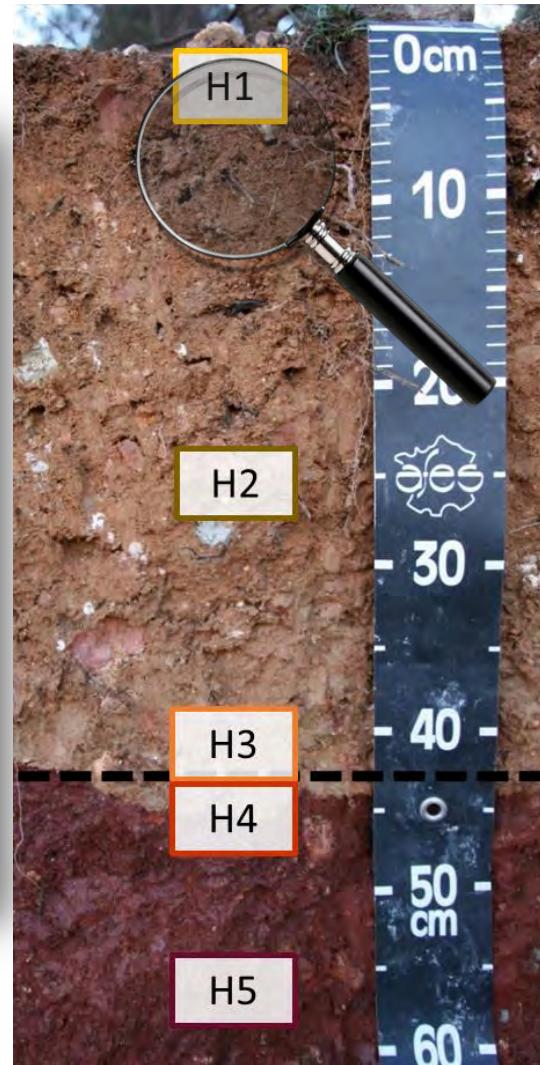

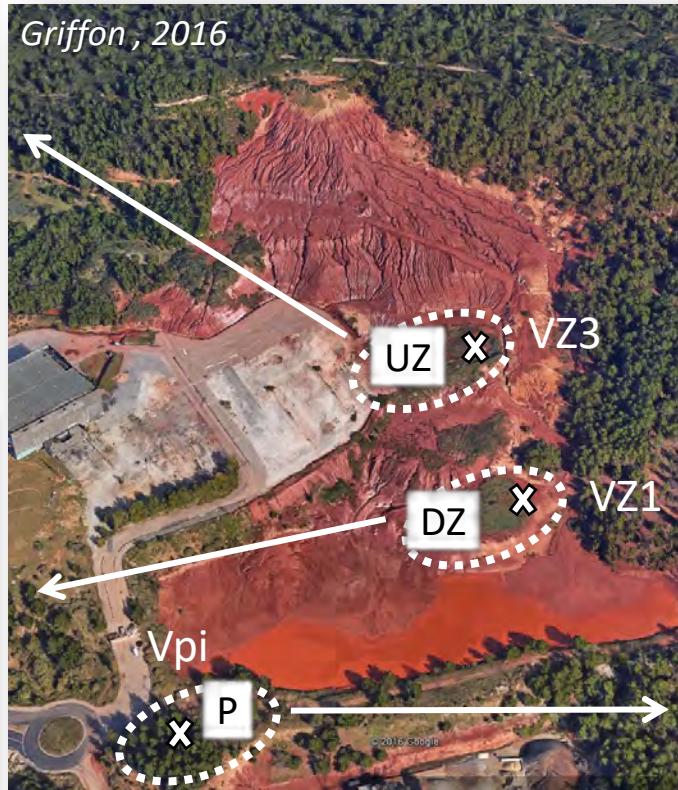

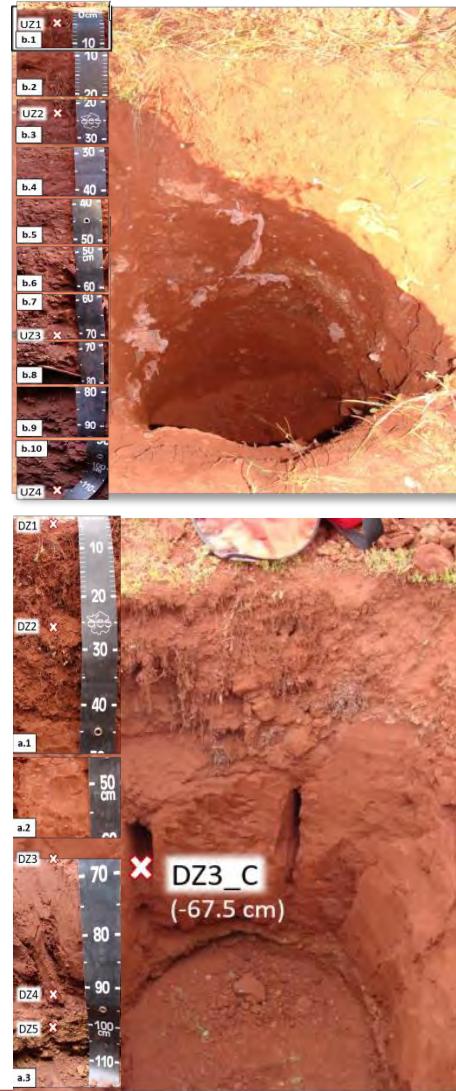

Properties of
vegetated uncapped and
capped bauxite residues

Sites and sampling

3 plots :

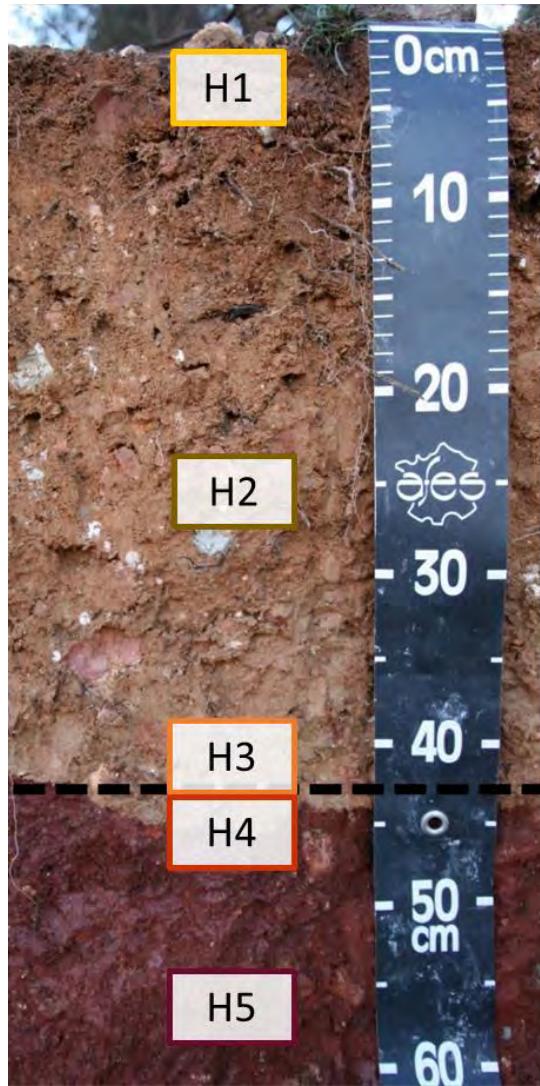

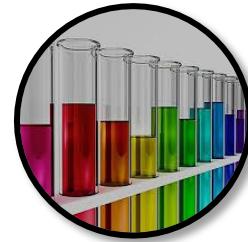

- 2 soil pits on herbaceous plots :
- UZ (upzone)
- DZ (downzone)
- 1 pinewood (P) plot
= natural outcrop

Fourrier et al., In prep.

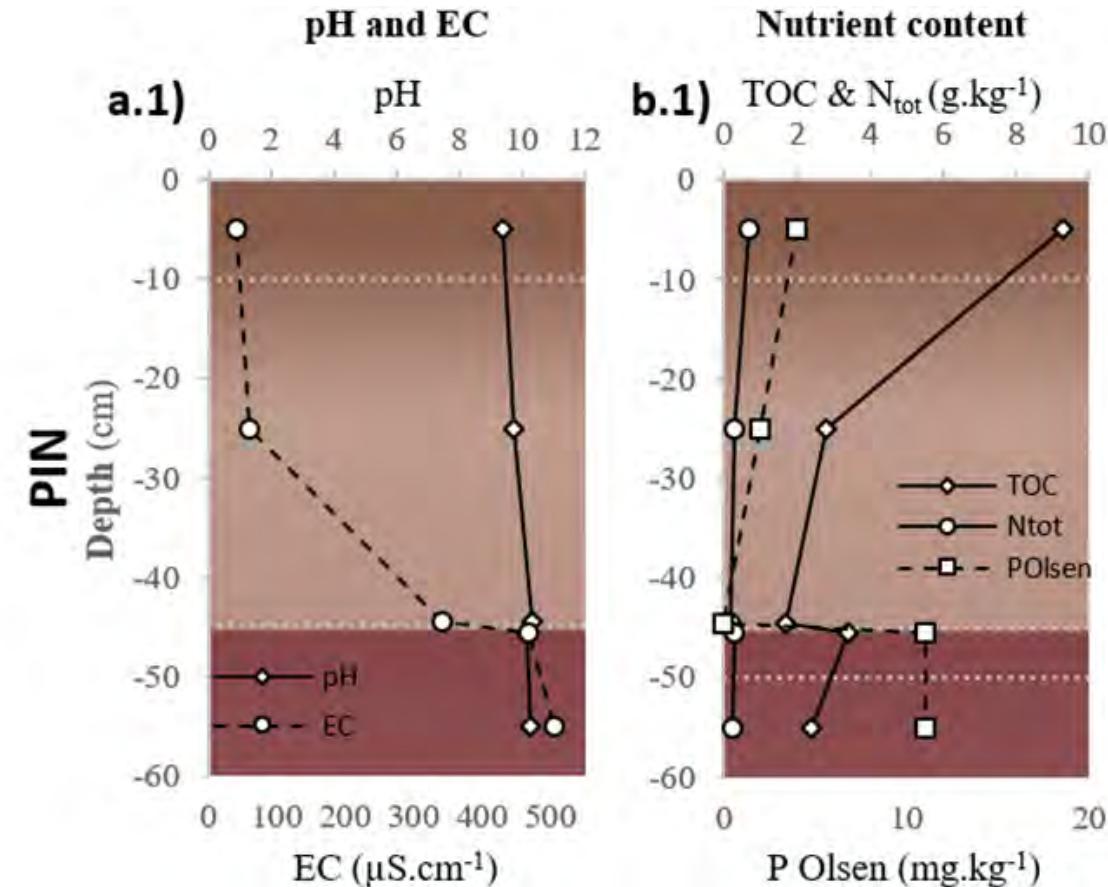

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Physico-chemical characteristics

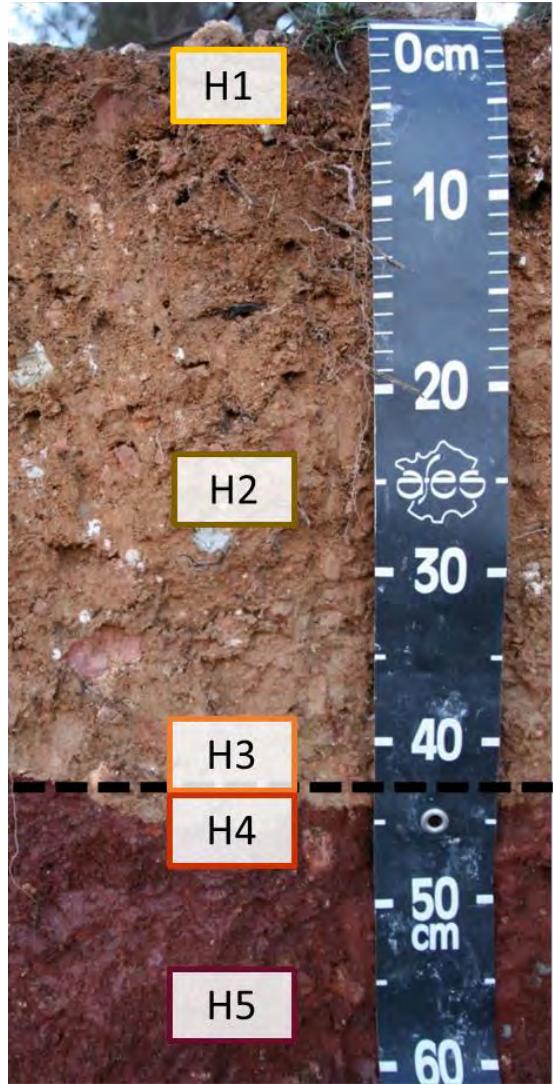

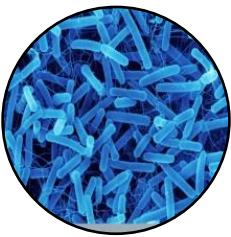

- Increase in pH and salinity with depth
- Decrease in nutrient content with depth (C, N, and P)

Fourrier *et al.*, In prep.

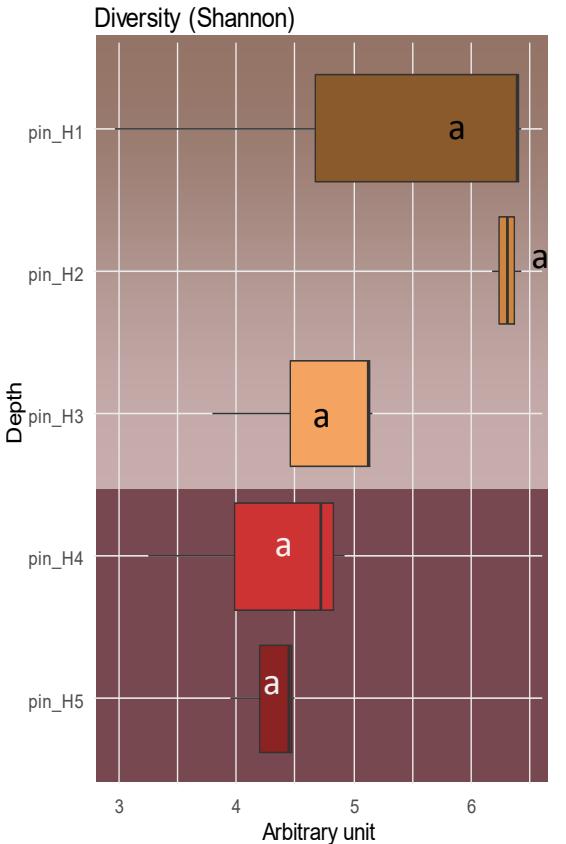

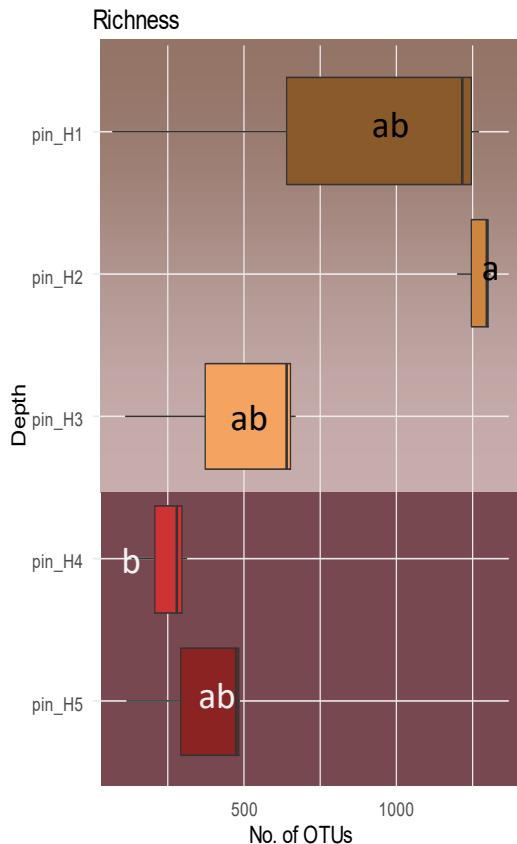

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

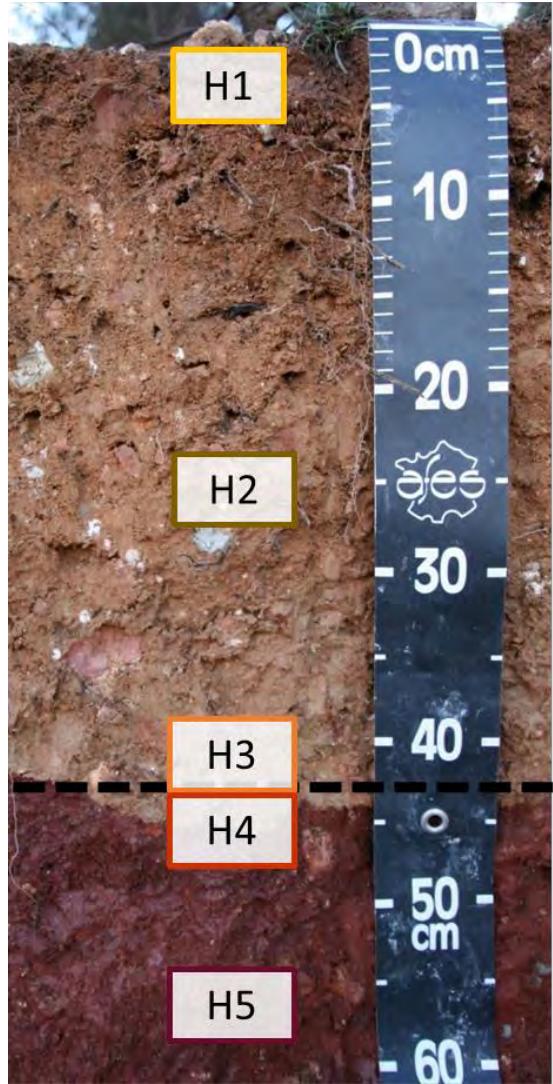

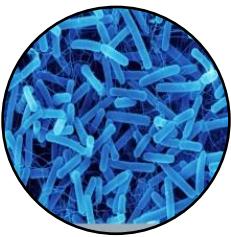

Bacterial richness and diversity

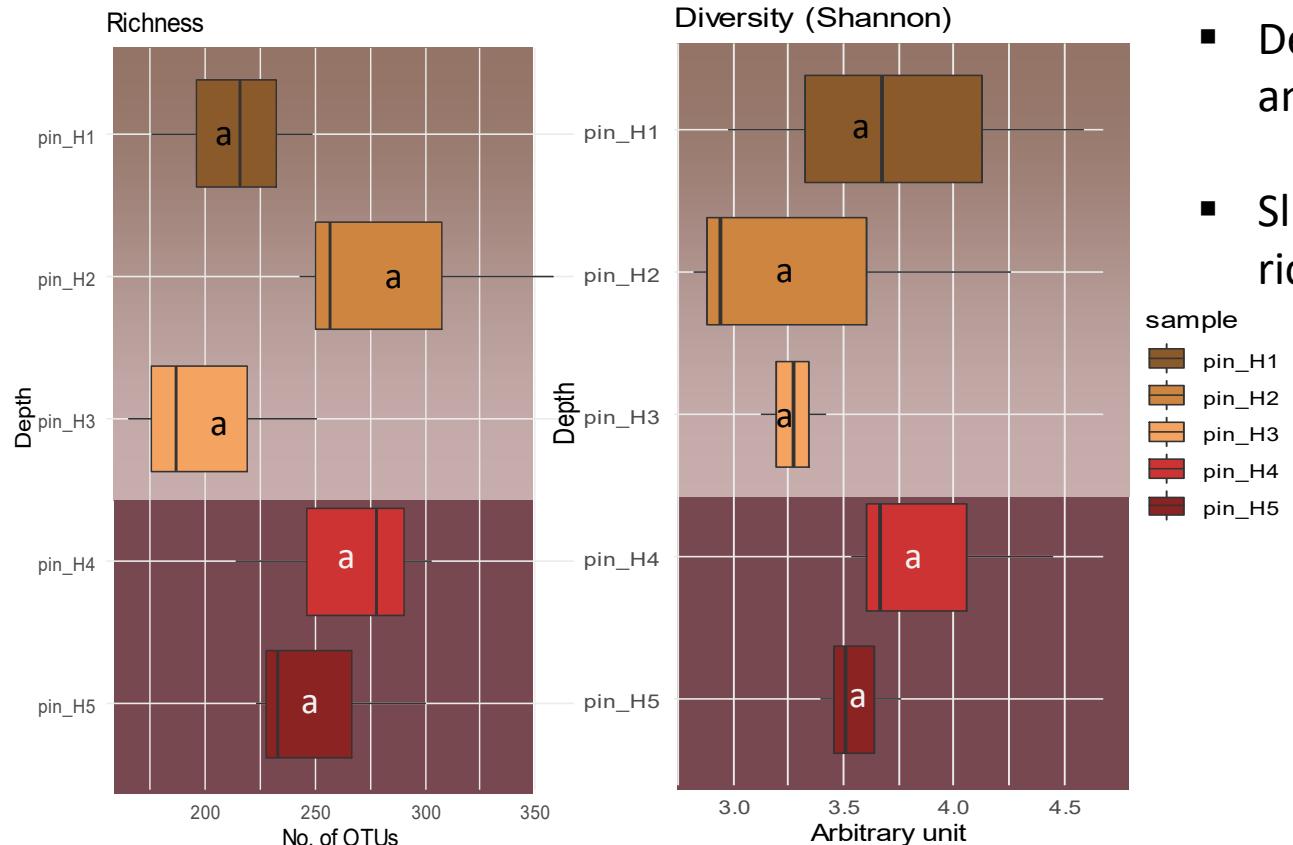

- Decrease in bacterial richness and diversity

Fungal richness and diversity

- Decrease in bacterial richness and diversity
- Slight decrease in fungal richness and diversity

sample
 pin_H1
 pin_H2
 pin_H3
 pin_H4
 pin_H5

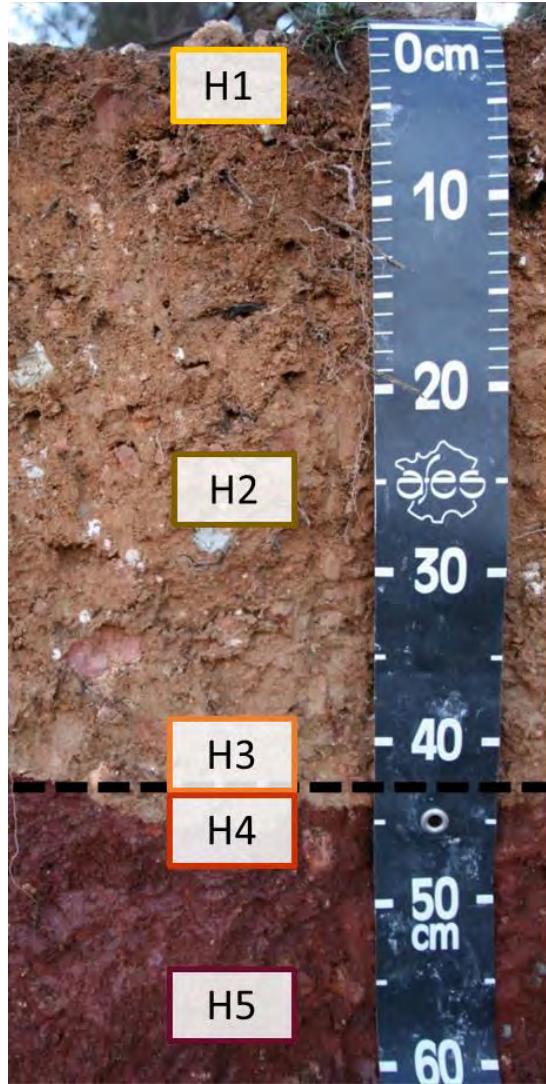

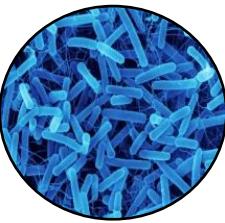

Fourrier et al., In prep.

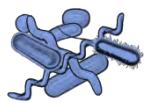

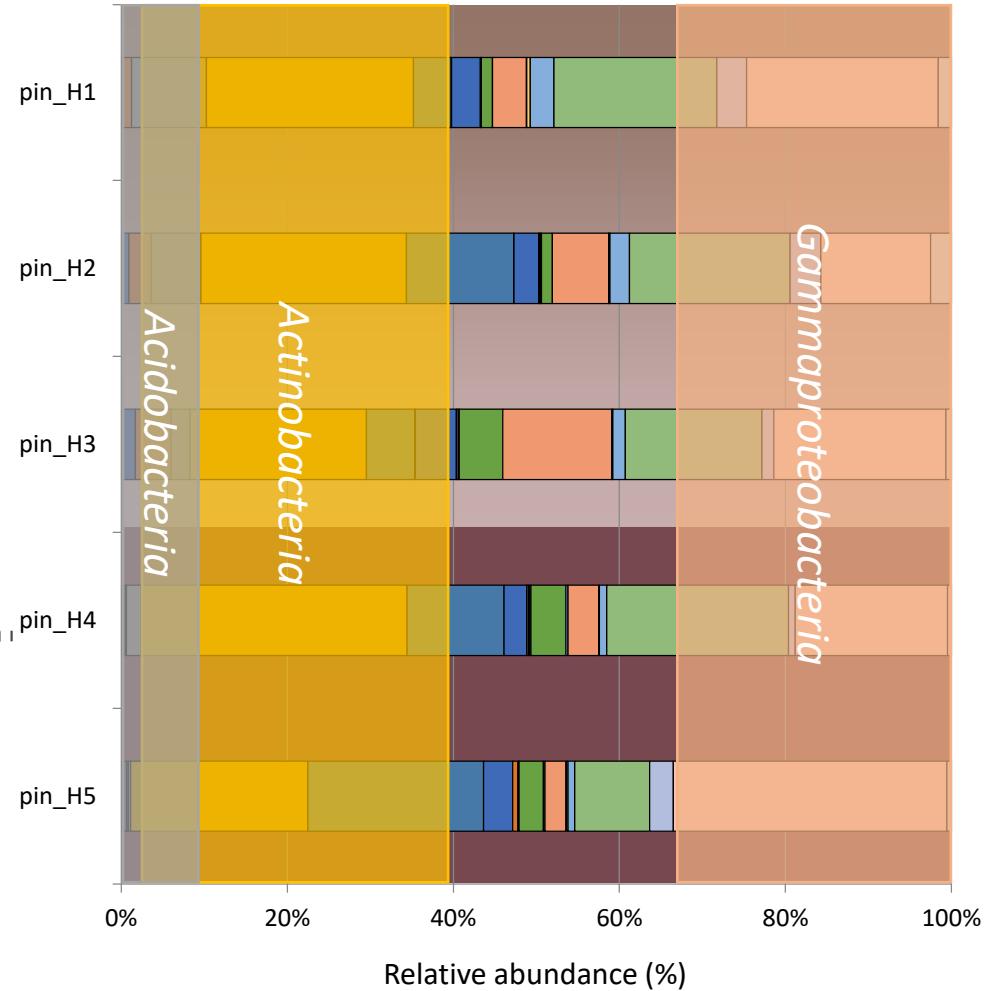

Journées Scientifiques :
 "Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Bacterial phyla

- Euryarchaeota
- Thaumarchaeota
- Acidobacteria
- Actinobacteria
- Bacteroidetes
- Chlamydiae
- Chloroflexi
- Deinococcus-Thermus
- Dependatiae
- Elusimicrobia
- Fibrobacteres
- Firmicutes
- Fusobacteria
- Gemmatimonadetes
- Nitrospirae
- Patescibacteria
- Planctomycetes
- Alphaproteobacteria
- Deltaproteobacteria
- Gammaproteobacteria
- Verrucomicrobia

- Decrease in *Acidobacteria* with depth
- Increase in *Actinobacteria* and *Archaea*
- the deepest horizon dominated by *Gammaproteobacteria*
- *Actinobacteria* + *Gammaproteobacteria* = unweathered residue (Wu et al., 2020)

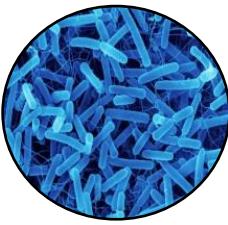

Fourrier et al., In prep.

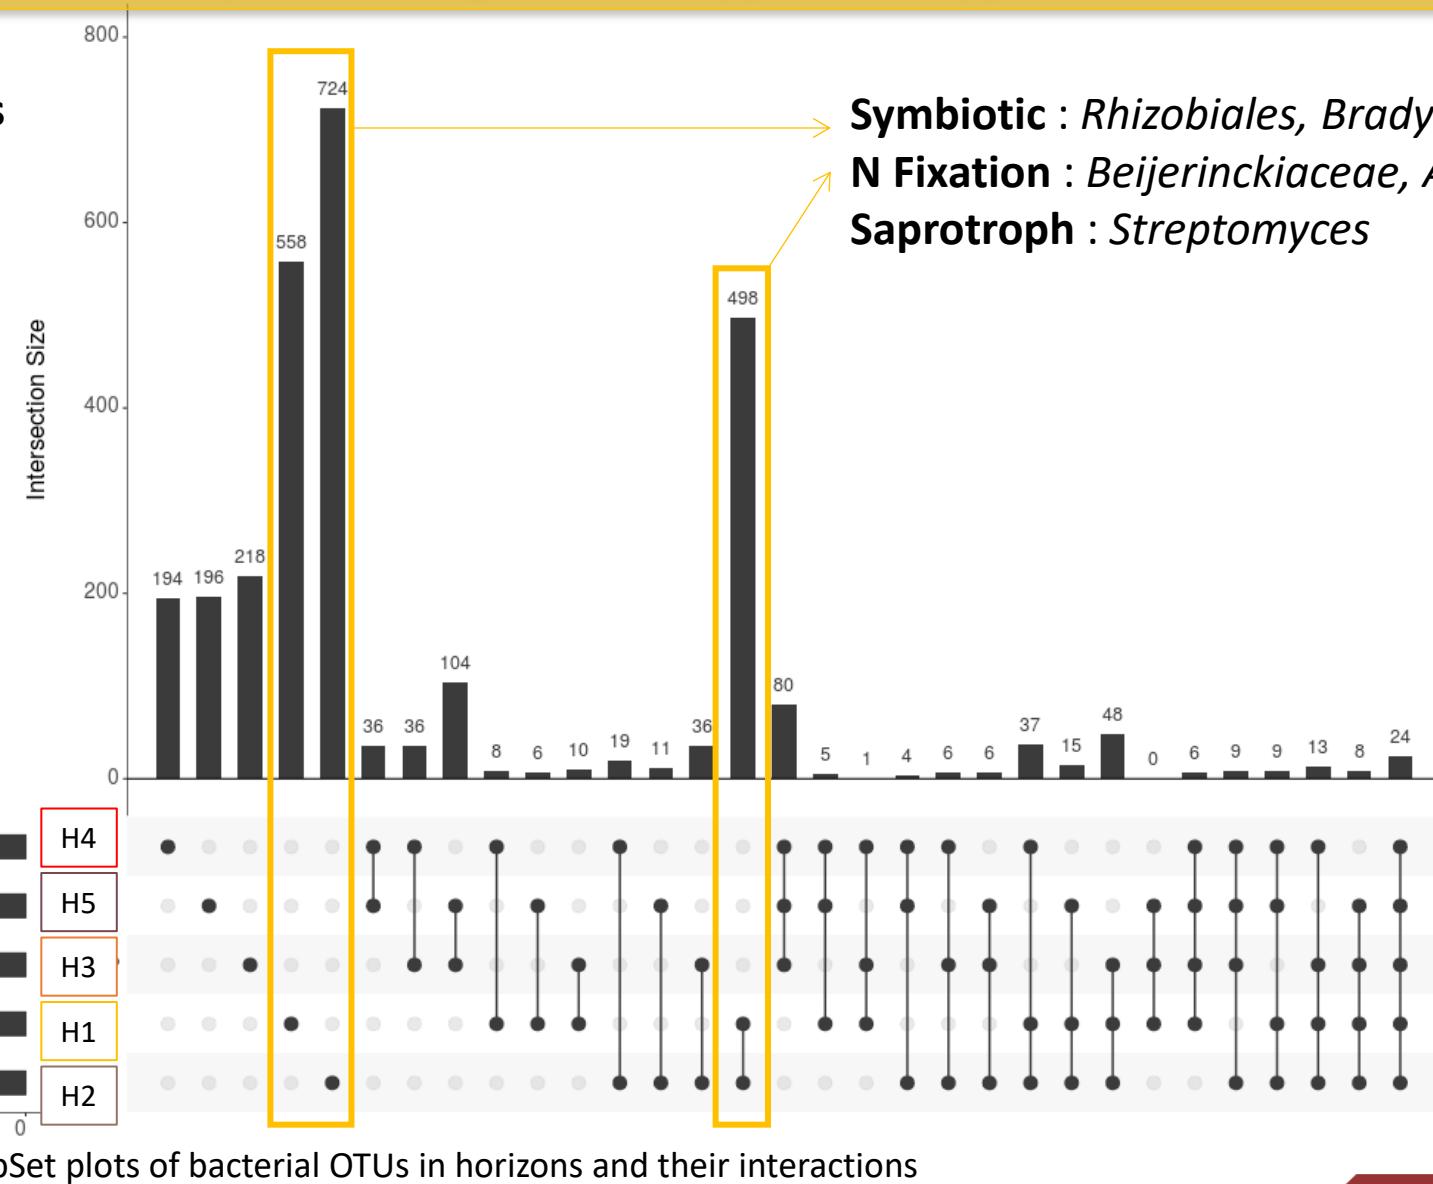

Journées Scientifiques :
"Bauxite Résidues"

10 Aix-en-Provence, du 08 au 09 juin 2021

Properties of vegetated uncapped and capped bauxite residues

Bacterial species

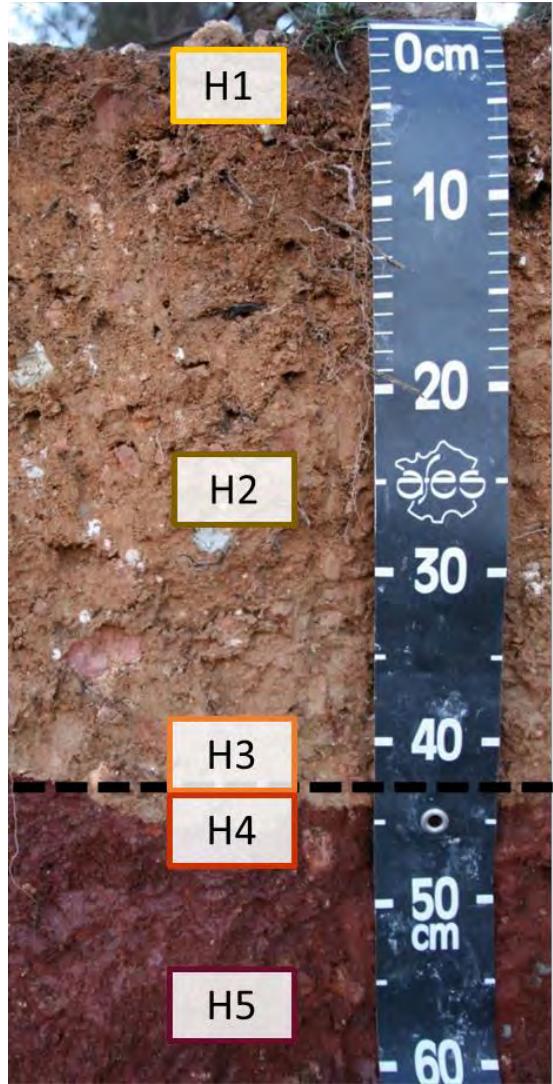

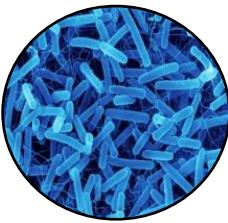

Symbiotic : *Rhizobiales*, *Bradyrhizobium japonicum*
N Fixation : *Beijerinckiaceae*, *Azospirillales*, *Nitrospira*
Saprotroph : *Streptomyces*

Fourrier et al., In prep.

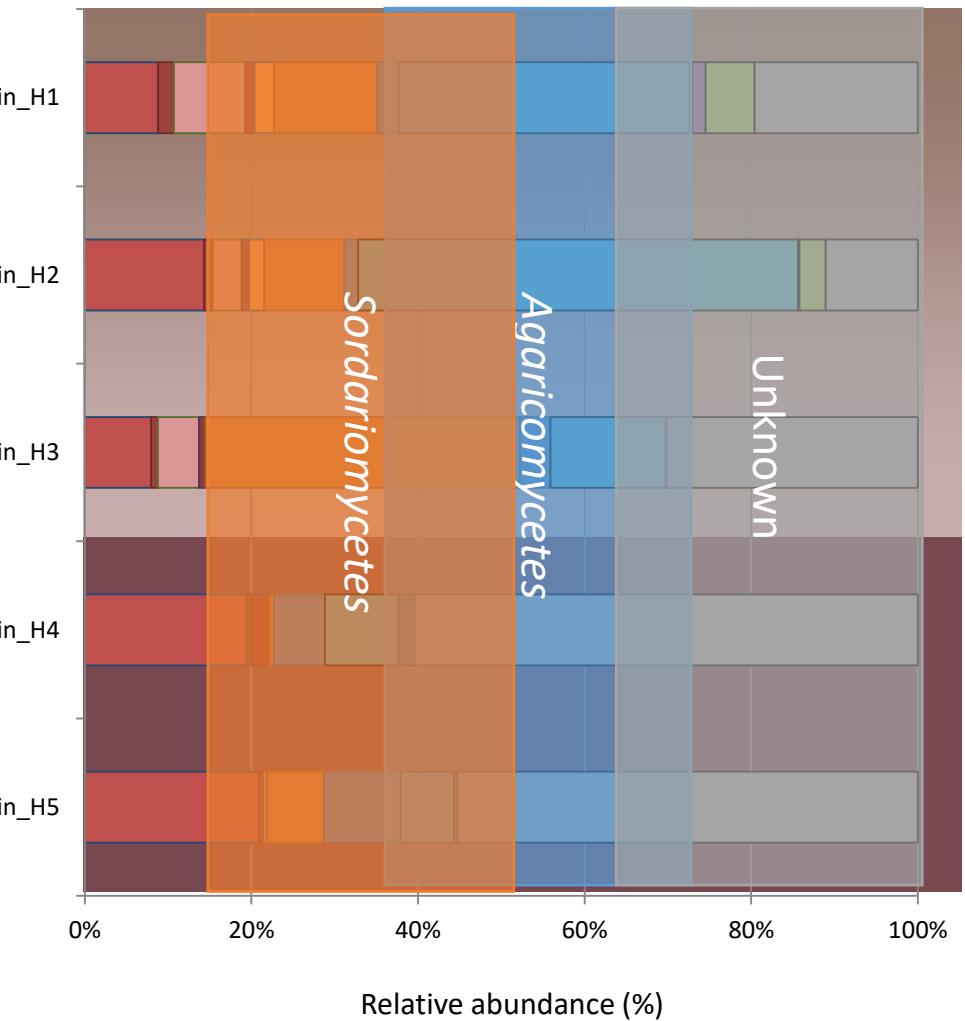

Journées Scientifiques :
 "Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Fungal class

- Decrease in *Agaricomycetes*
- Increase in *Sordariomycetes* and Unknown fungi

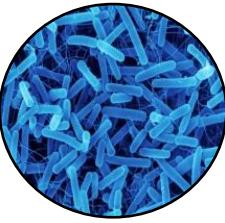

Fourrier et al., In prep.

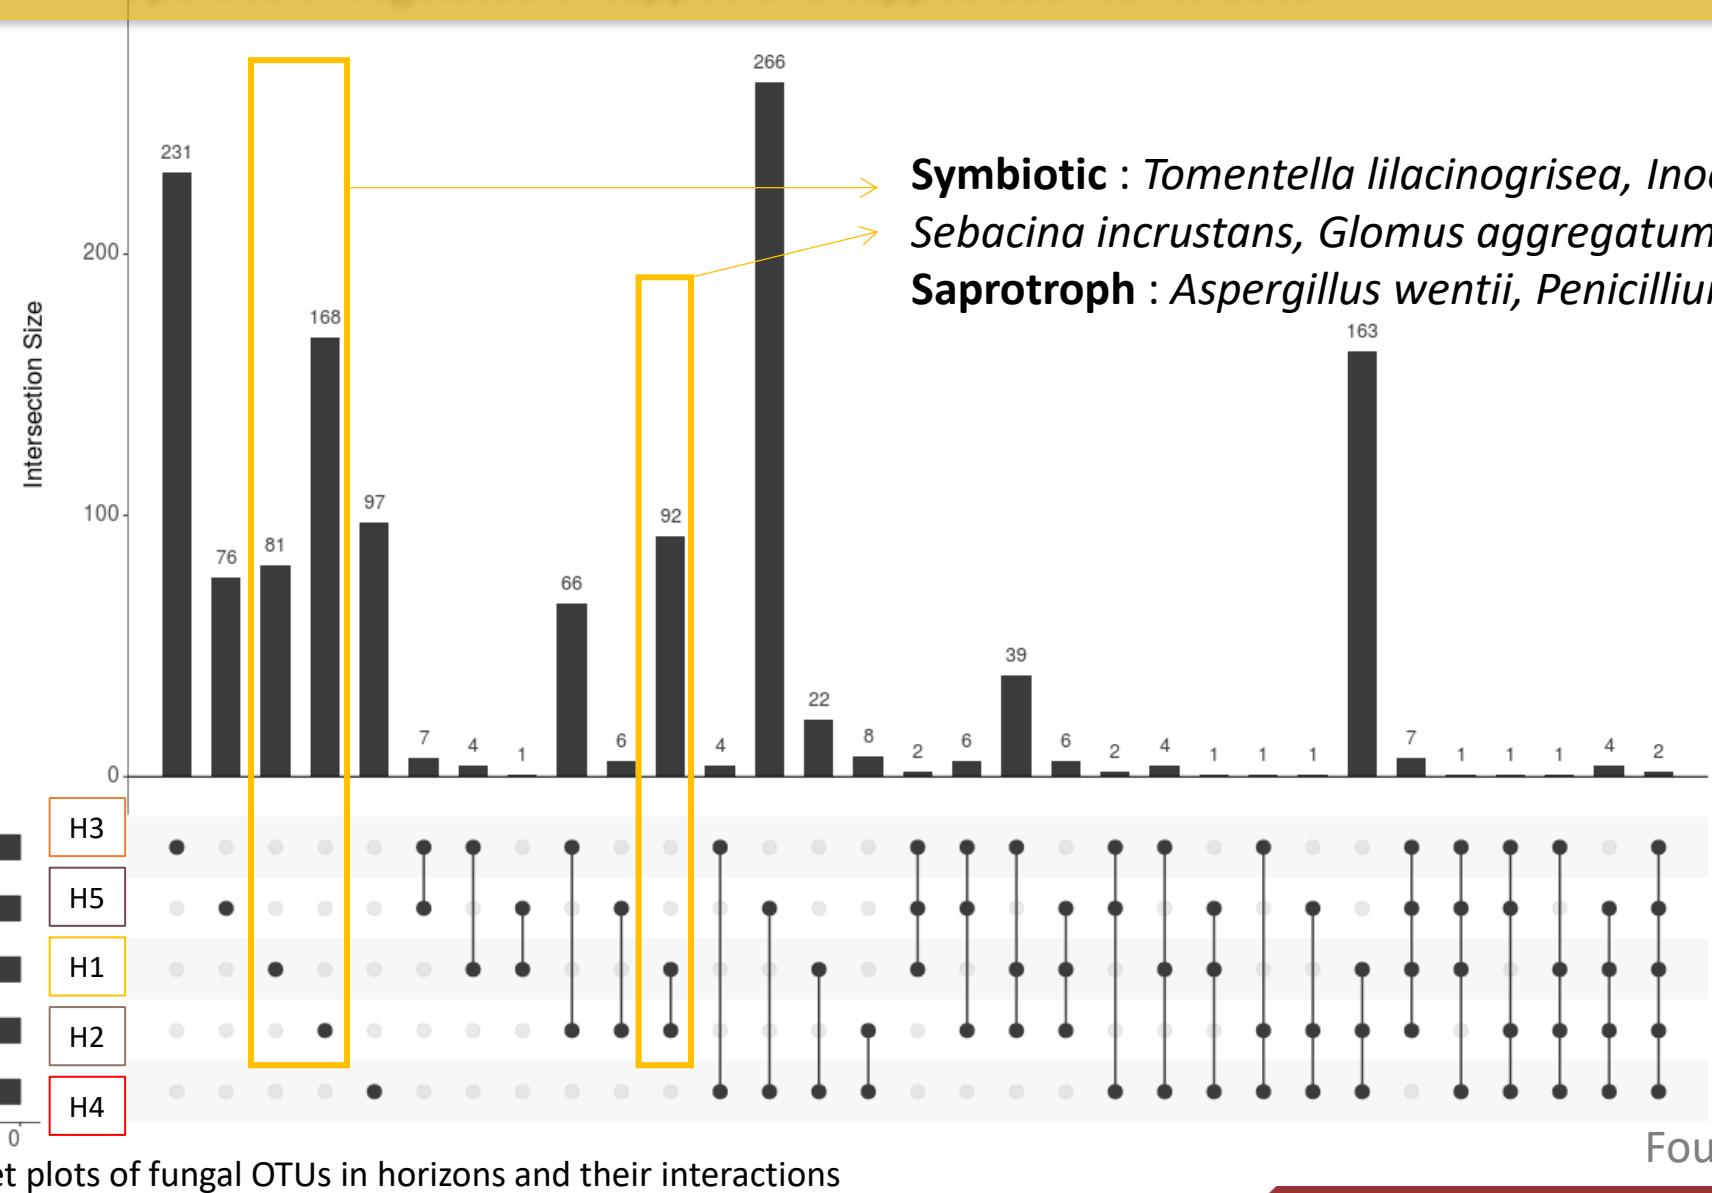

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Properties of vegetated uncapped and capped bauxite residues

Fungal species

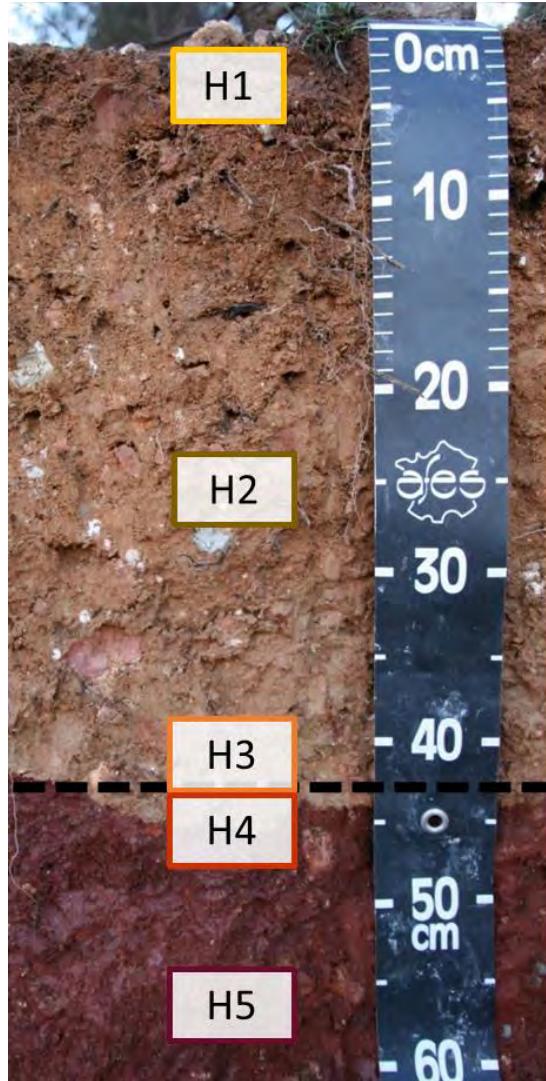

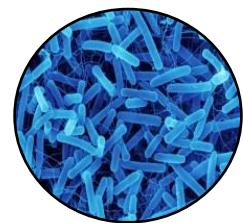

Symbiotic : *Tomentella lilacinogrisea*, *Inocybe arenicola*,
Sebacina incrassans, *Glomus aggregatum*
Saprotroph : *Aspergillus wentii*, *Penicillium nodositatum*

Fourrier et al., In prep.

Journées Scientifiques :
 "Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Conclusion

Red muds capped with fill soil with pinewood roots

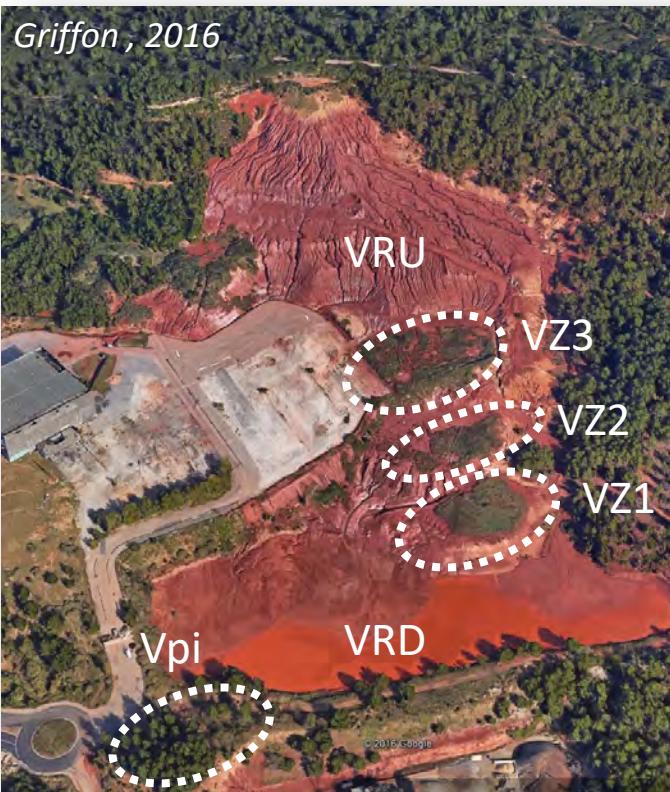

- Presence of rhizosphere microorganisms
- Restoration of soil biological function

Enzymatic activities of profile samples.

Profile	Horizon	Arylamidase	β -glucosidase	Alkaline phosphatase	Arylsulfatase	
PIN	P1	3.60 ± 0.47	a	9.47 ± 0.63	a	1.03 ± 0.01
	P2	0.59 ± 0.06	d	4.44 ± 0.09	b	0.21 ± 0.01
PSUP		1.85 ± 0.23	b	1.04 ± 0.28	c	0
PINF		1.47 ± 0.12	bc	0.49 ± 0.02	c	0
	P3	0.95 ± 0.03	cd	0	c	0.05 ± 0.04

Sites and sampling

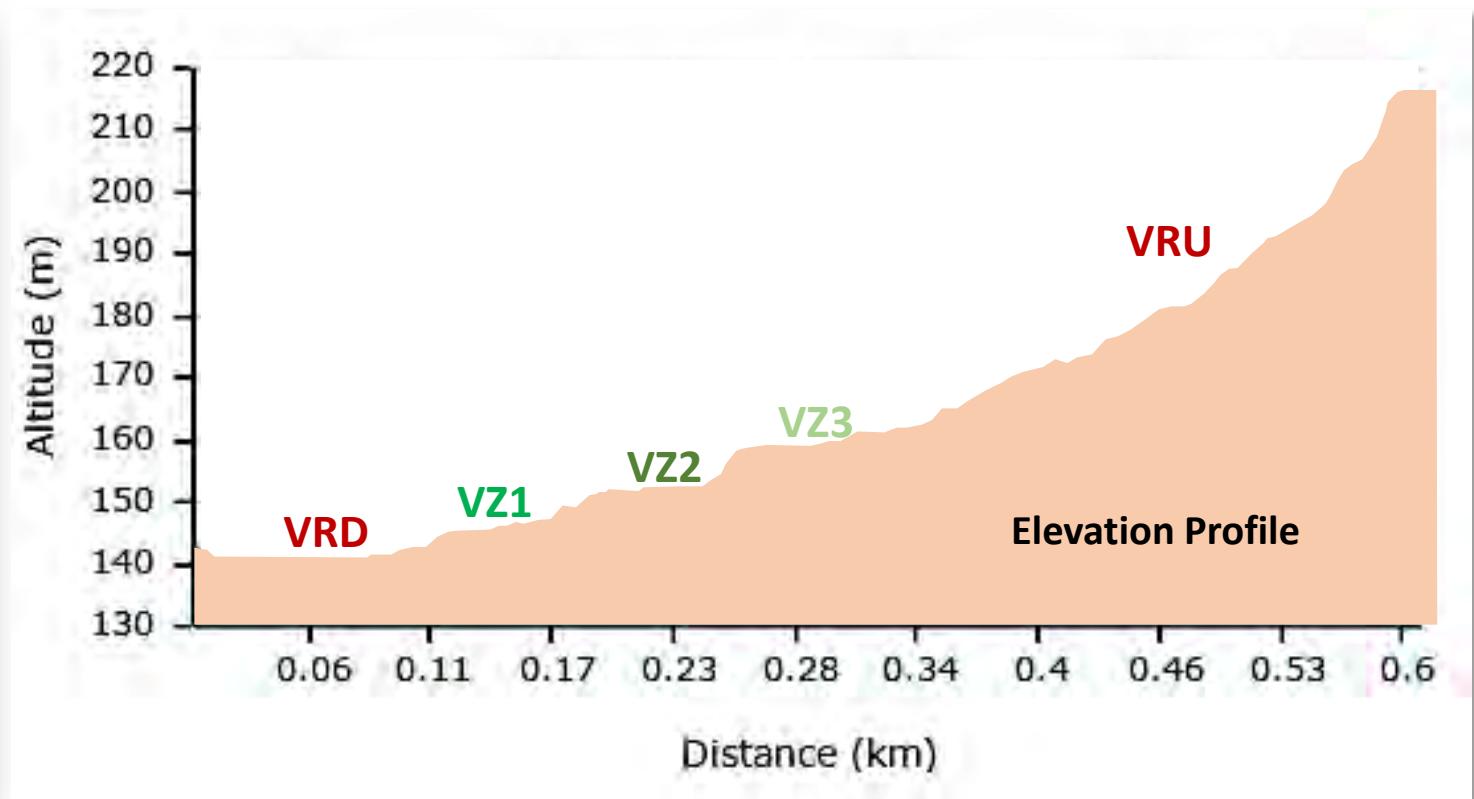

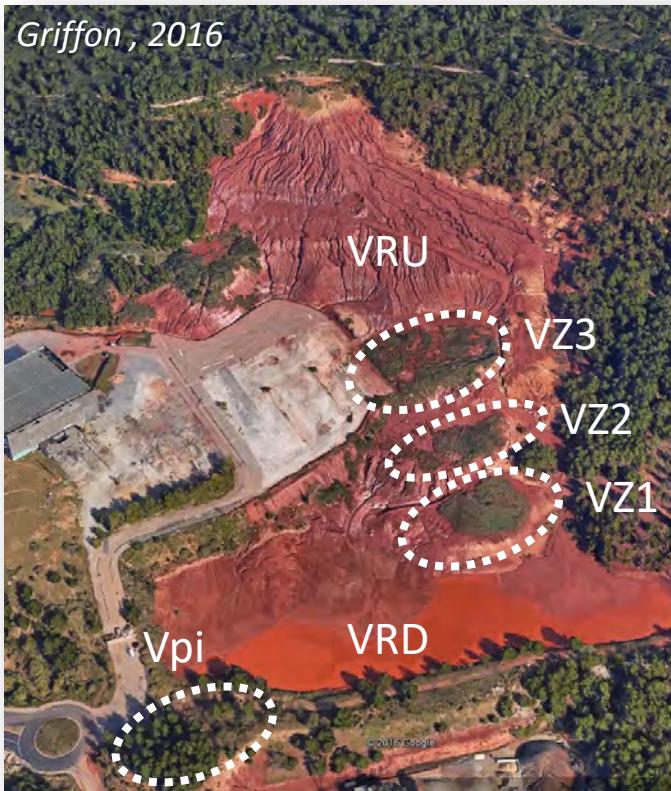

- 2 sites
- 5 vegetalized plots (VZ1, VZ2, VZ3, MG1, MG2)
- 2 unvegetalized plots (top of the fields (VRU) and the bottom of the fields (VRD))
- 1 pinewood soil (Vpi)

Foulon *et al.*, In prep.

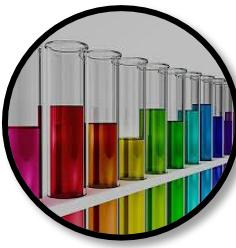

Sites and sampling

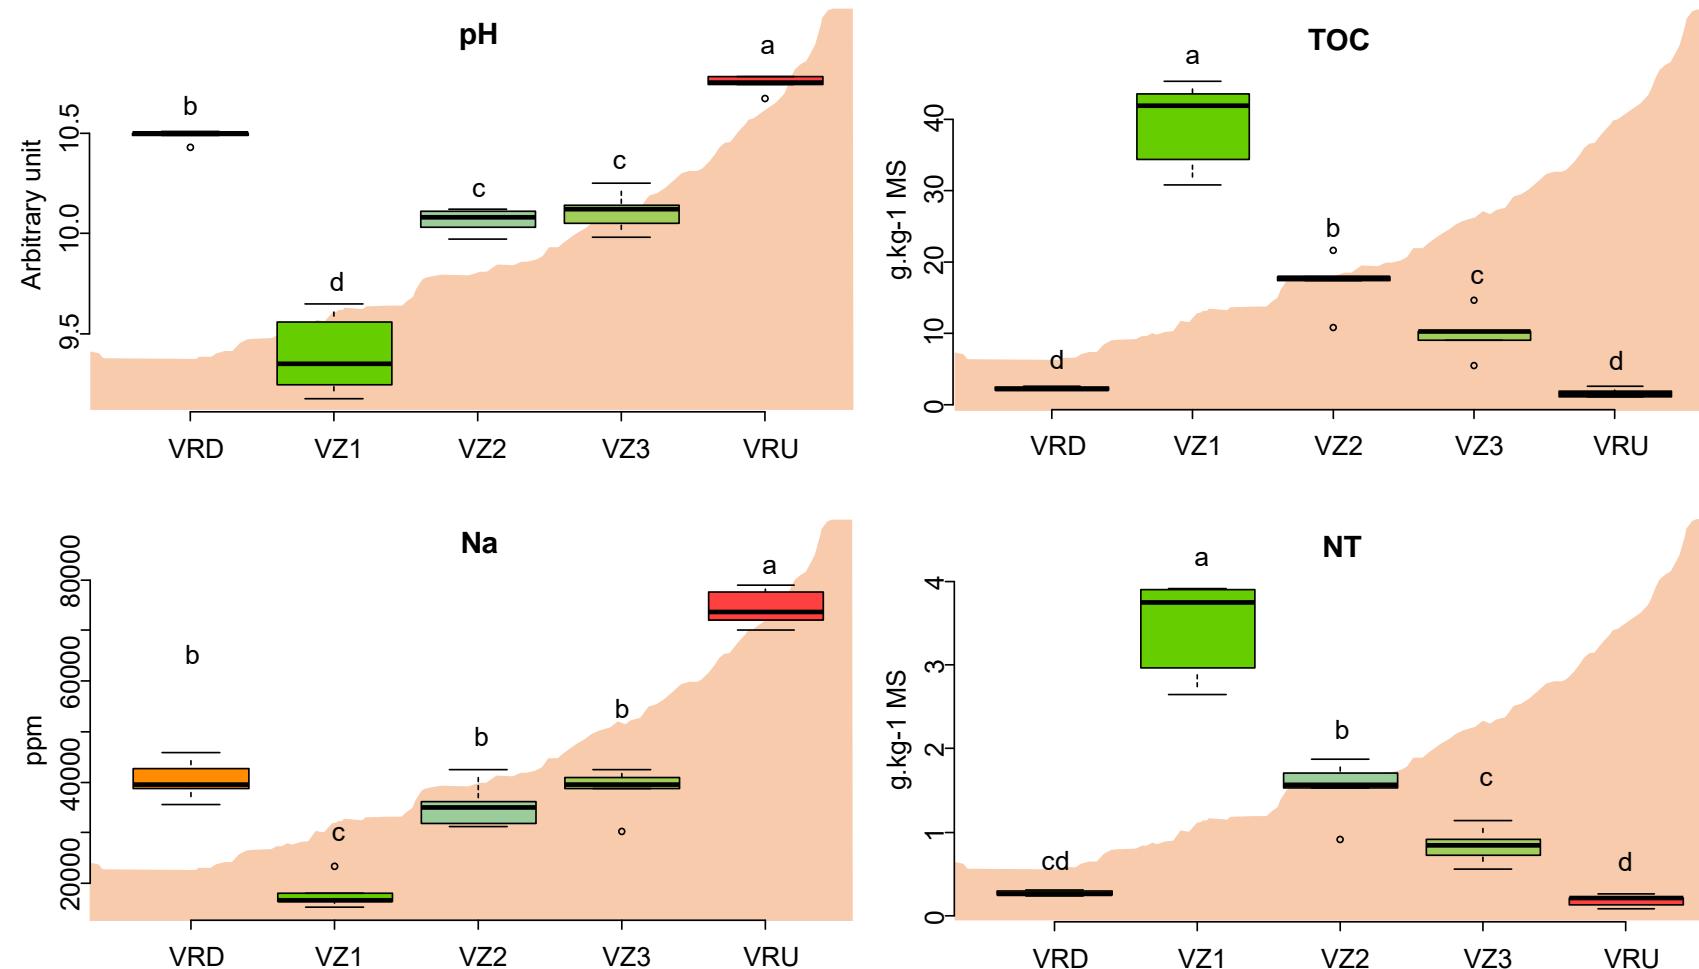

- Elevation profile along the sampling transects
- three terraced ground areas with spontaneous vegetation

Foulon *et al.*, In prep.

Physico-chemical characteristics

Foulon et al., In prep.

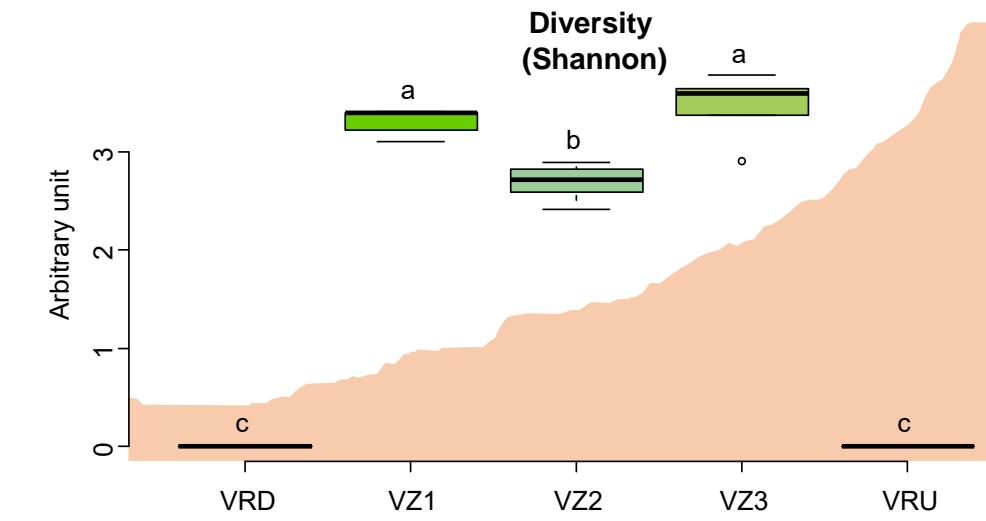

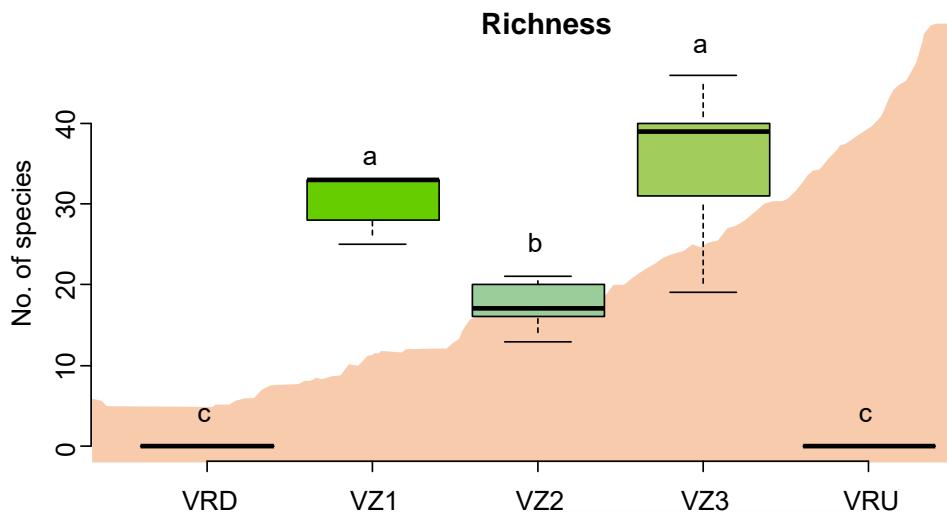

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Plant richness and diversity

- Vegetation richness and diversity is higher in vegetalized plot 1 and 3

Foulon *et al.*, In prep.

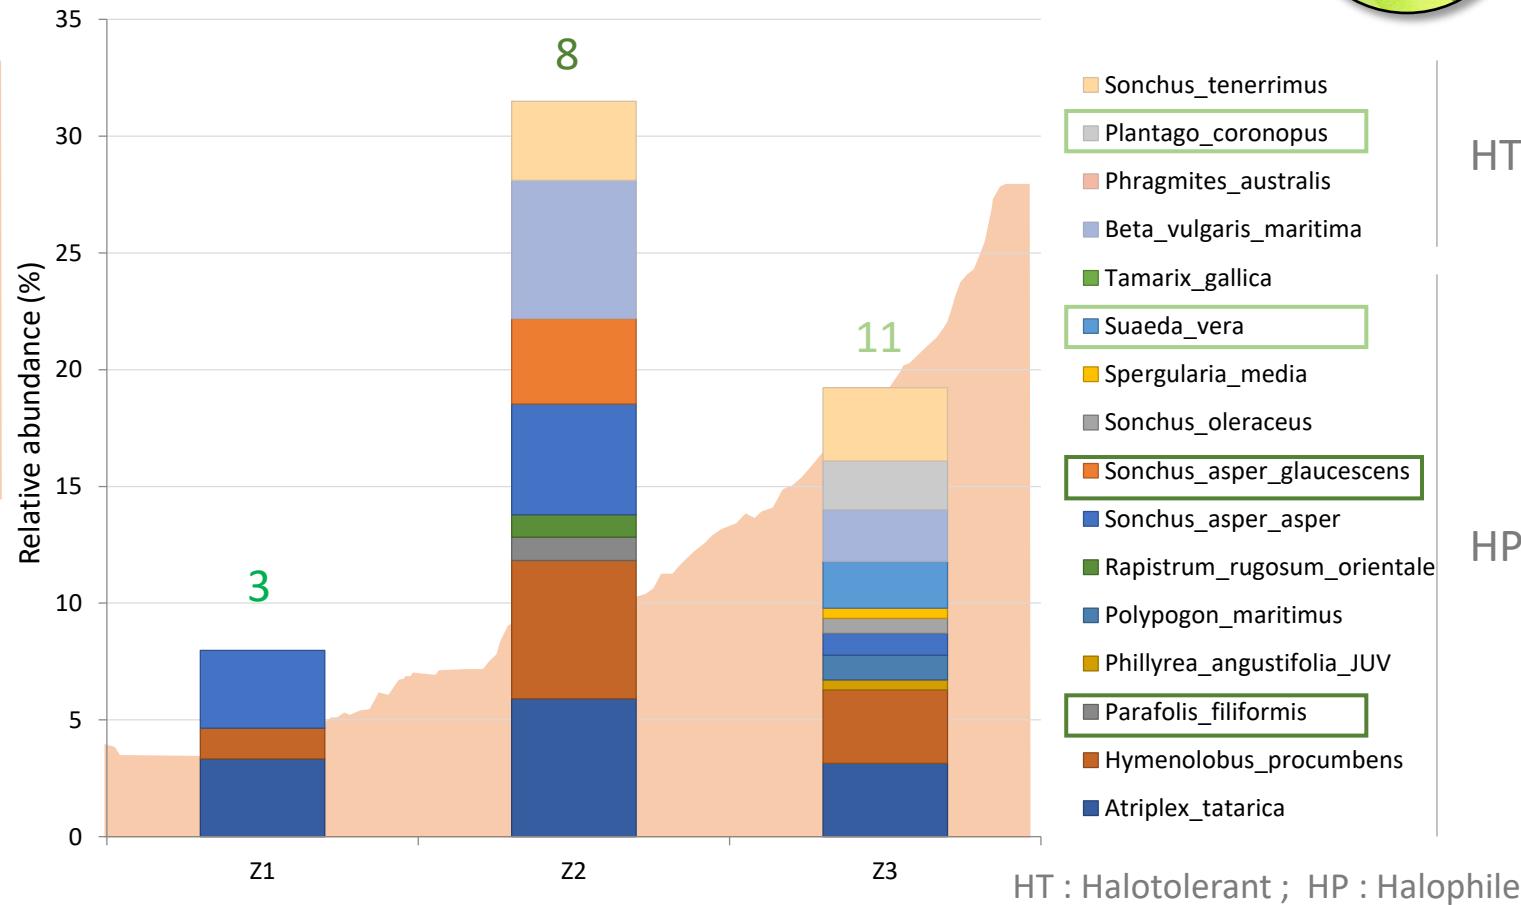

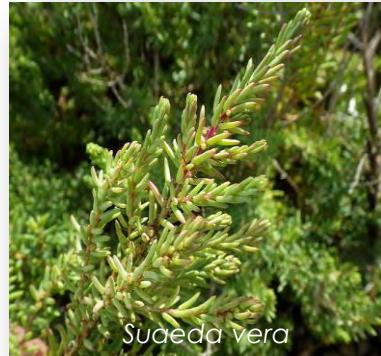

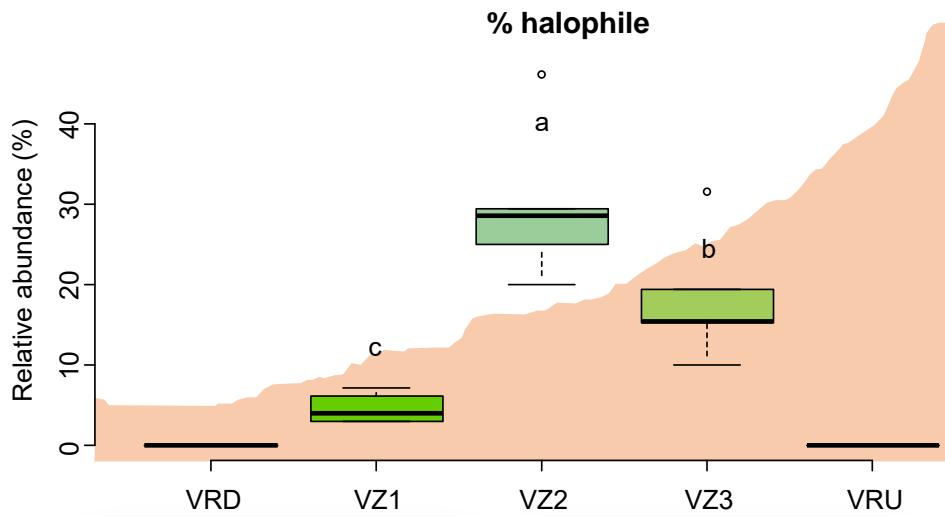

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Halophilic vegetation

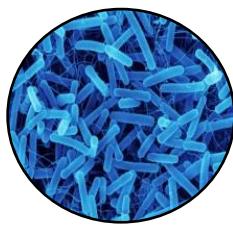

- Proportion of halophilic vegetation is higher in upper plots

Foulon *et al.*, In prep.

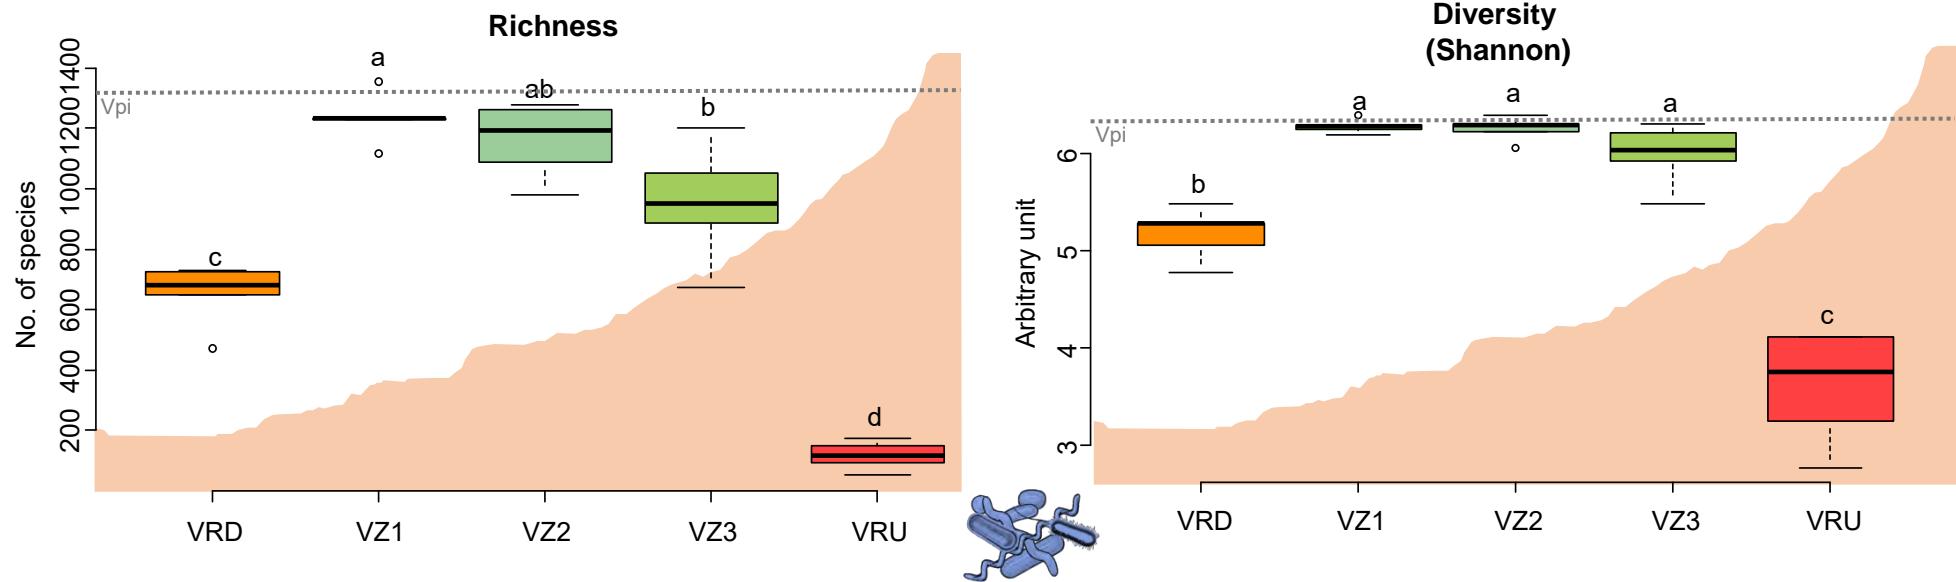

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

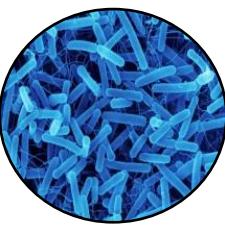

Bacterial richness and diversity

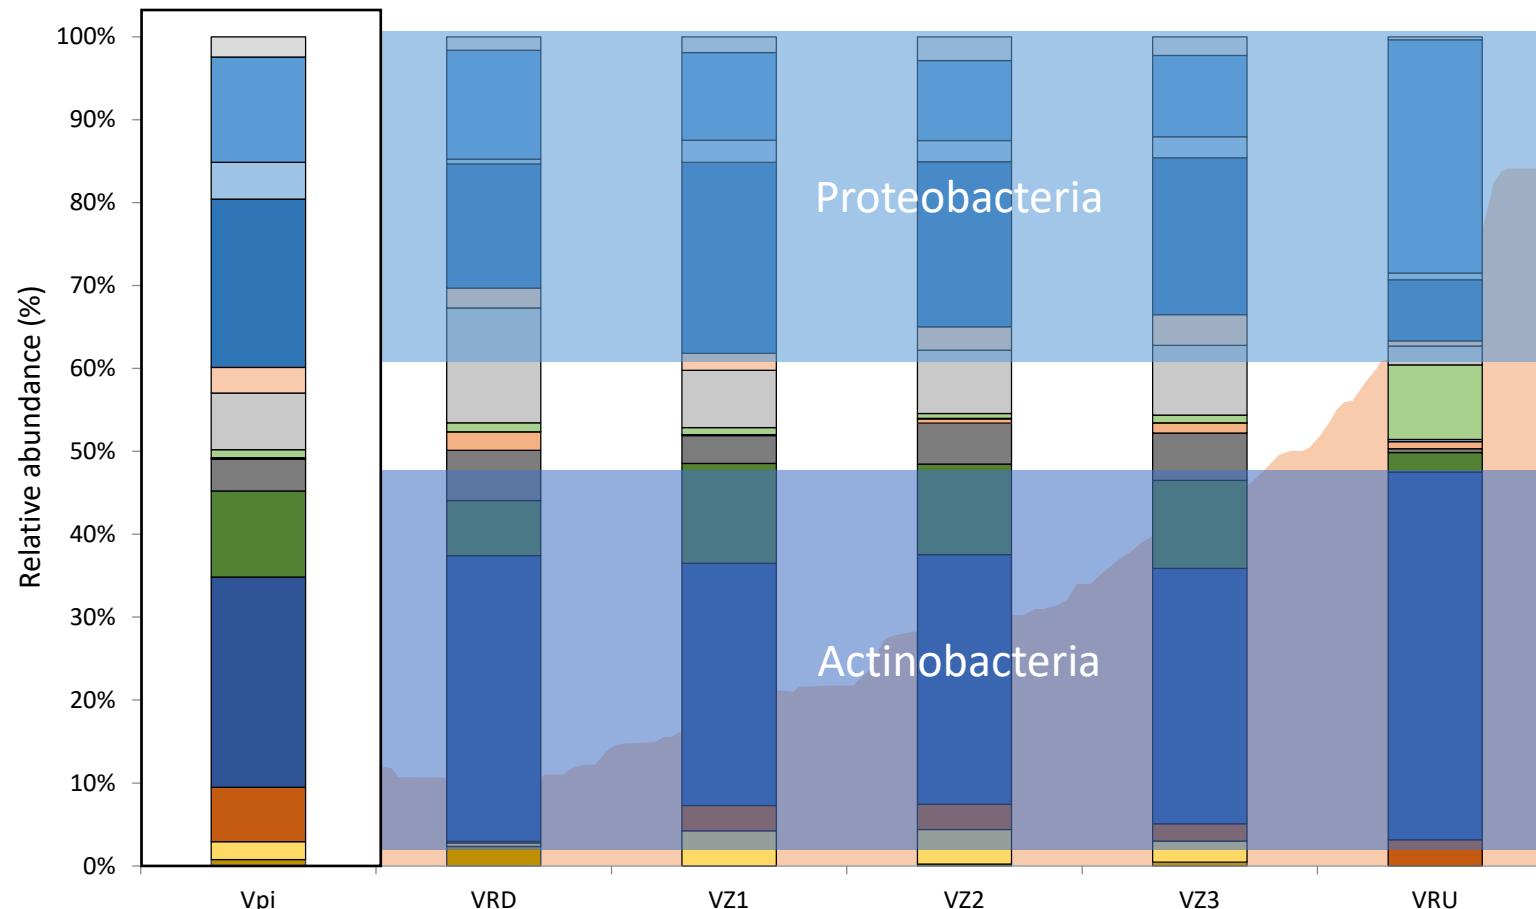

- Bacterial richness and diversity is higher in vegetalized plots relative to unvegetalized red mud
- Increased in bacterial richness with decreased elevation
- Bacterial richness and diversity in vegetalized plots close to the pinewood soil

Foulon *et al.*, In prep.

Bacterial phyla

- Verrucomicrobia
- Gammaproteobacteria
- Deltaproteobacteria
- Alphaproteobacteria
- Planctomycetes
- Gemmatimonadetes
- Firmicutes
- Elusimicrobia
- Deinococcus-Thermus
- Chloroflexi
- Bacteroidetes
- Actinobacteria
- Acidobacteria
- Thaumarchaeota
- Euryarchaeota

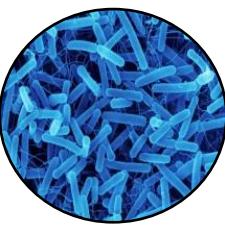

- All red mud soil dominated by *Actinobacteria*
- *Proteobacteria*, especially *Gammaproteobacteria* more present in red mud soil
- *Acidobacteria* + *Alphaproteobacteria* = old weathered residue (Wu et al., 2020)
- *Firmicute* + *Actinobacteria* = high alkaline and saline conditions (Krishna et al., 2014)

Foulon et al., In prep.

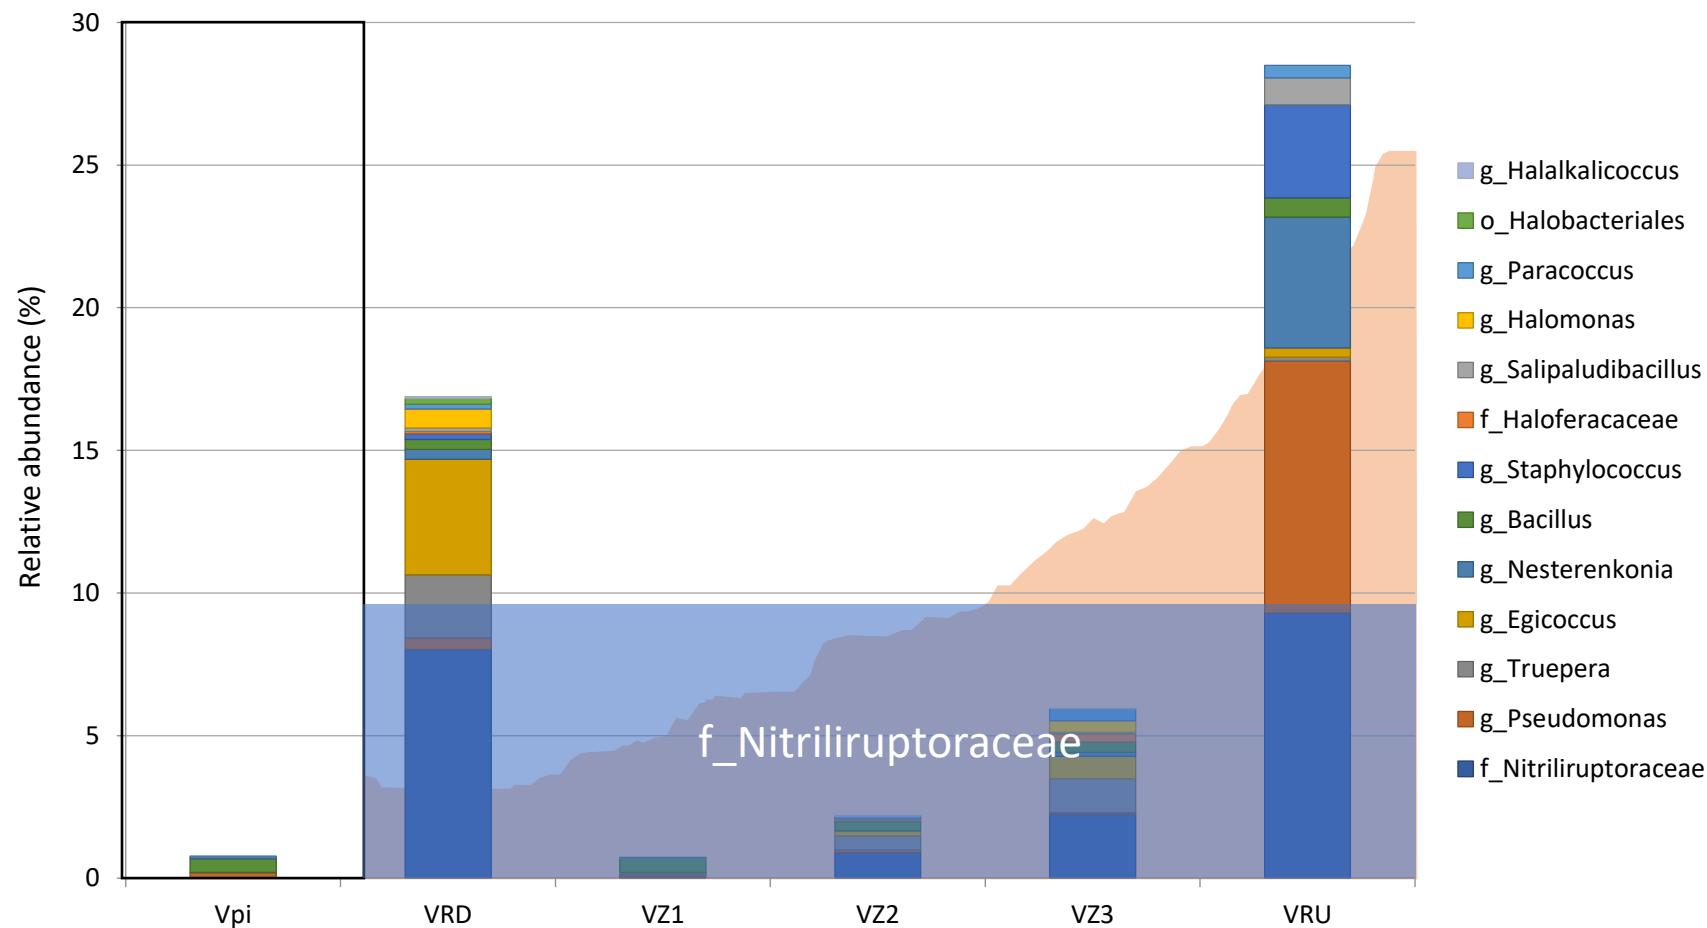

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Halophilic and alkaliphilic bacteria

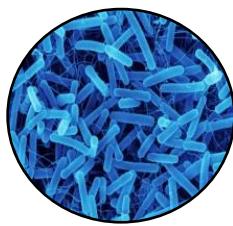

- Halophilic and alkaliphilic bacteria more abundant in red mud soil : ex. *Egicoccus*, *Truepera*, *Halomonas*, *Nesterenkonia*
- Alkaliphilic family *Nitriliruptoraceae* increase in red mud soil, specifically *nitriliruptor* genus

Foulon et al., In prep.

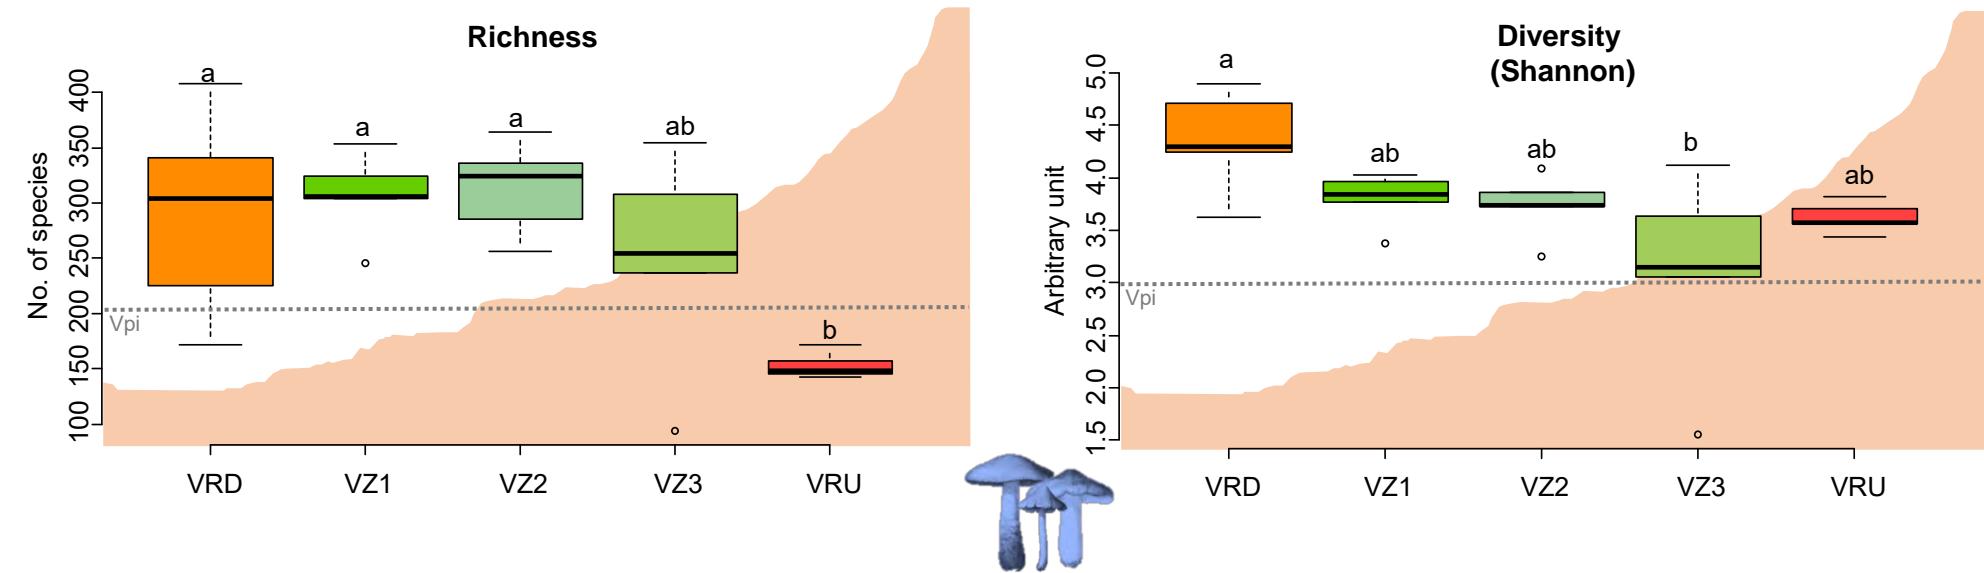

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

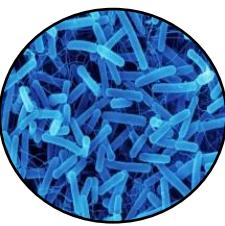

Fungal richness and diversity

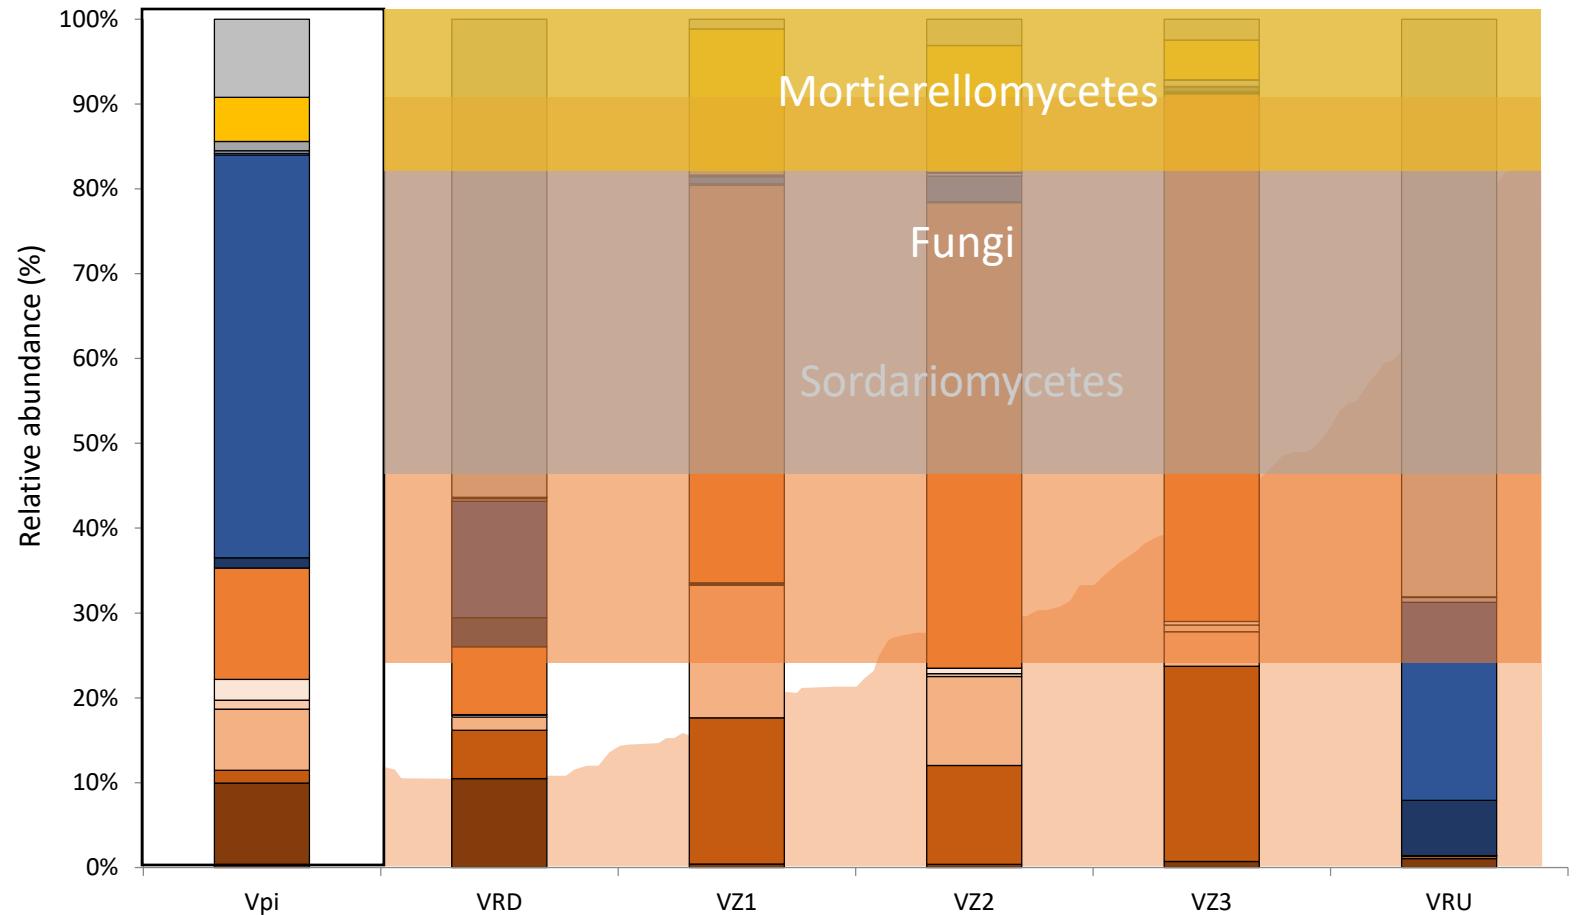

- Fungal richness and diversity is higher in vegetalized soil relative to unvegetalized red mud at the top of the fields (VRU)
- Increased in fungal richness with decreased elevation
- Fungal richness and diversity in vegetalized plots is greater than pinewood soil

Foulon *et al.*, In prep.

Fungal class

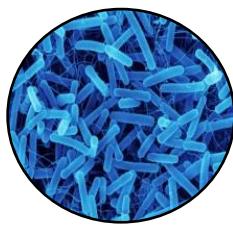

- *Sordariomycetes* and *Mortierellomycetes* increase in vegetalized red mud
- All red mud soil dominated by unknown Fungi
- *Sordariomycetes* + unknown Fungi = like hypersaline environments (Santini et al., 2015)

Foulon et al., In prep.

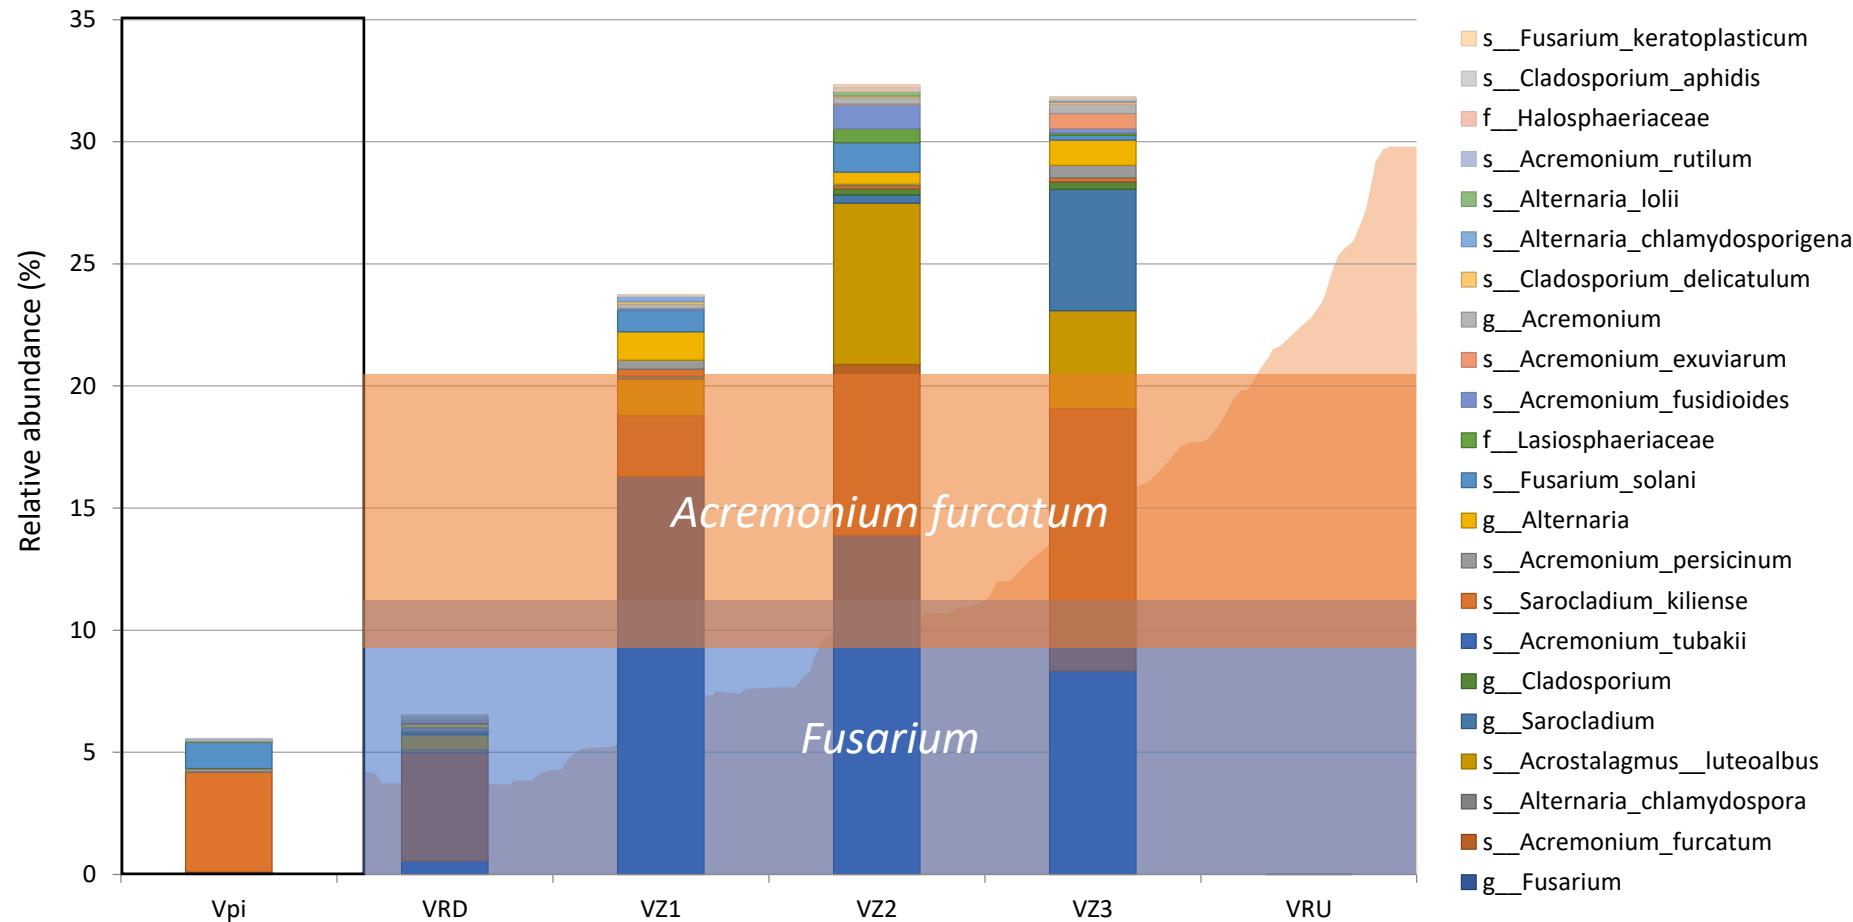

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Halophilic and alkaliphilic fungal

- Halophilic and alkaliphilic fungi more abundant in red mud soil
- Genus *Fusarium* and species *Acremonium furcatum* dominated vegetalized soils

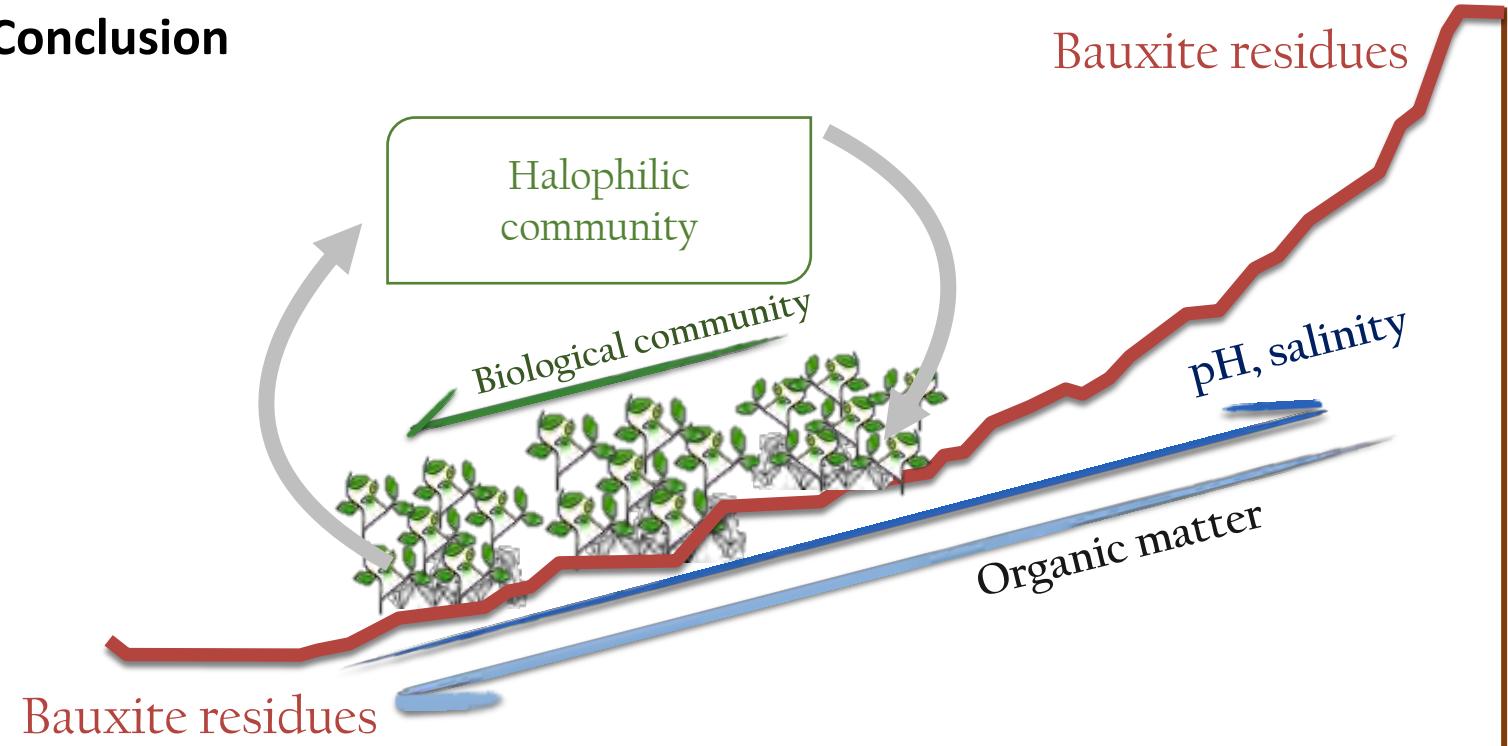

Foulon et al., In prep.

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

Conclusion

Atriplex tatarica

*Beta vulgaris subsp.
maritima*

Plantago coronopus

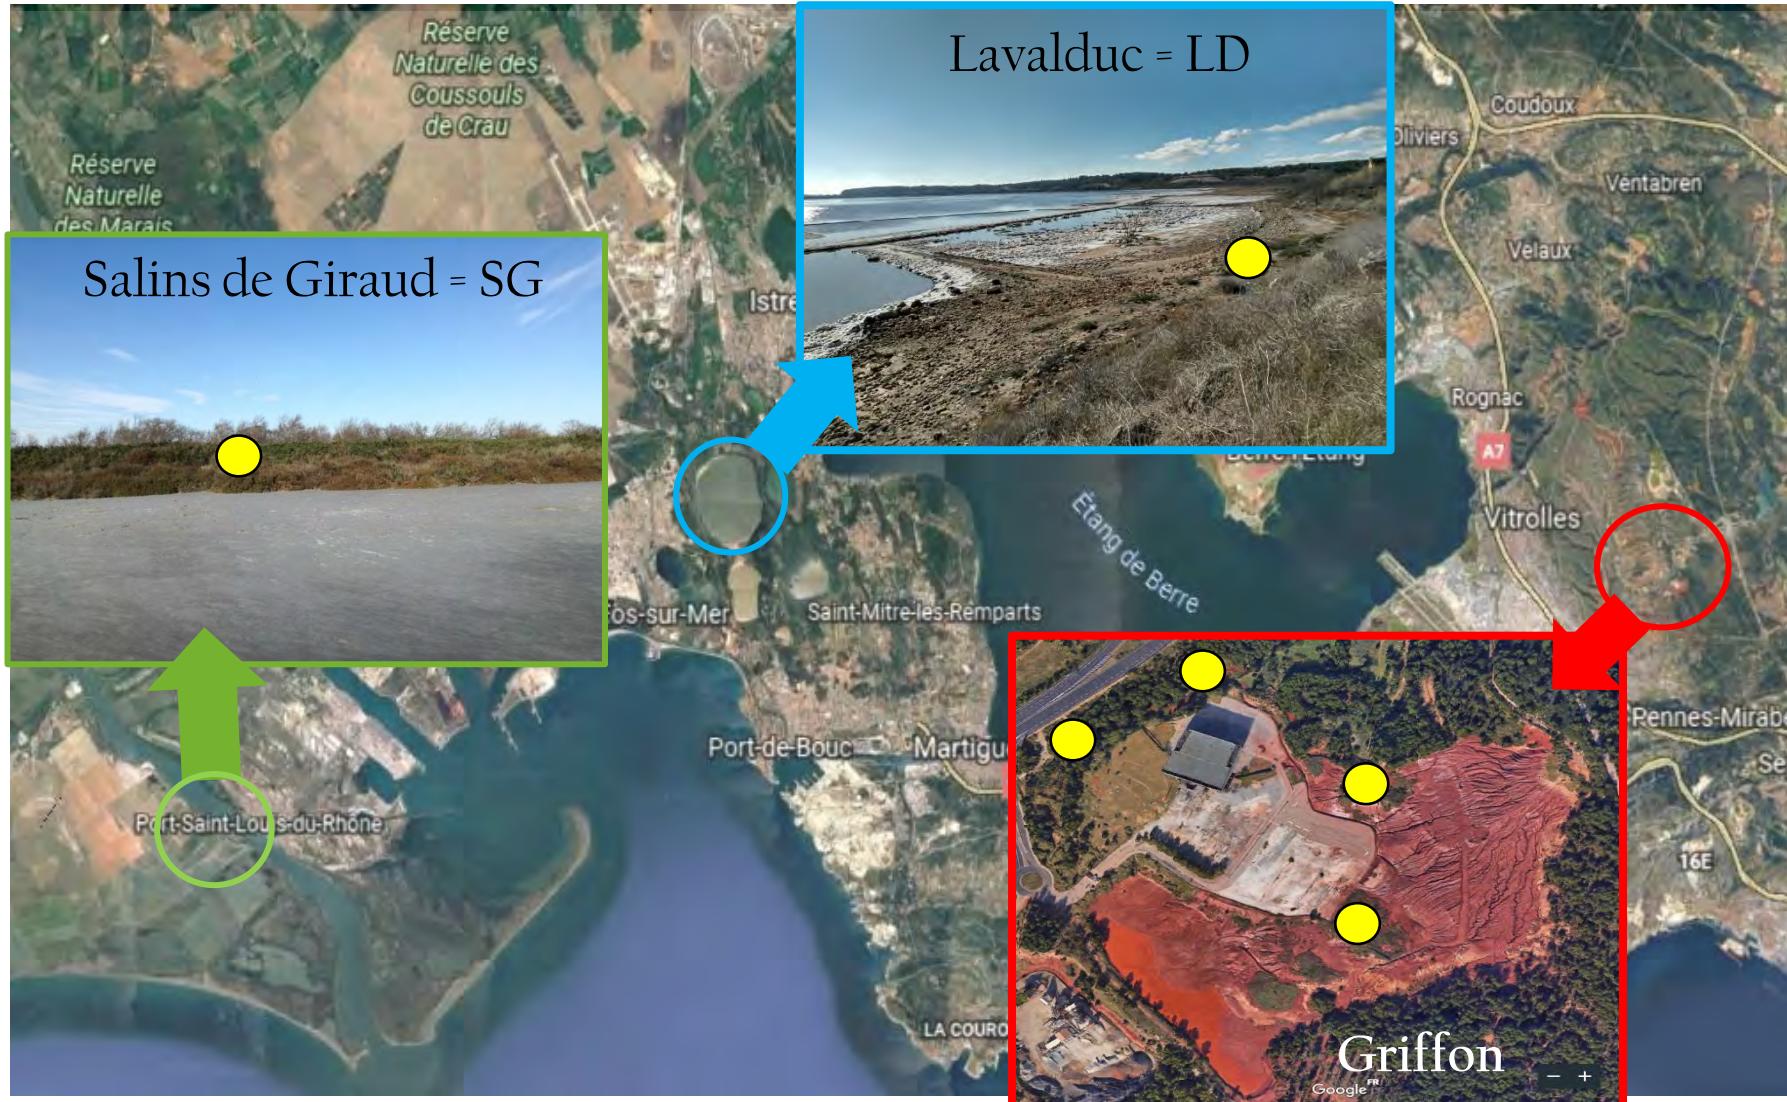

Suaeda vera

Sansouïres biotope

Mediterranean salt marsh
Foulon et al., In prep.

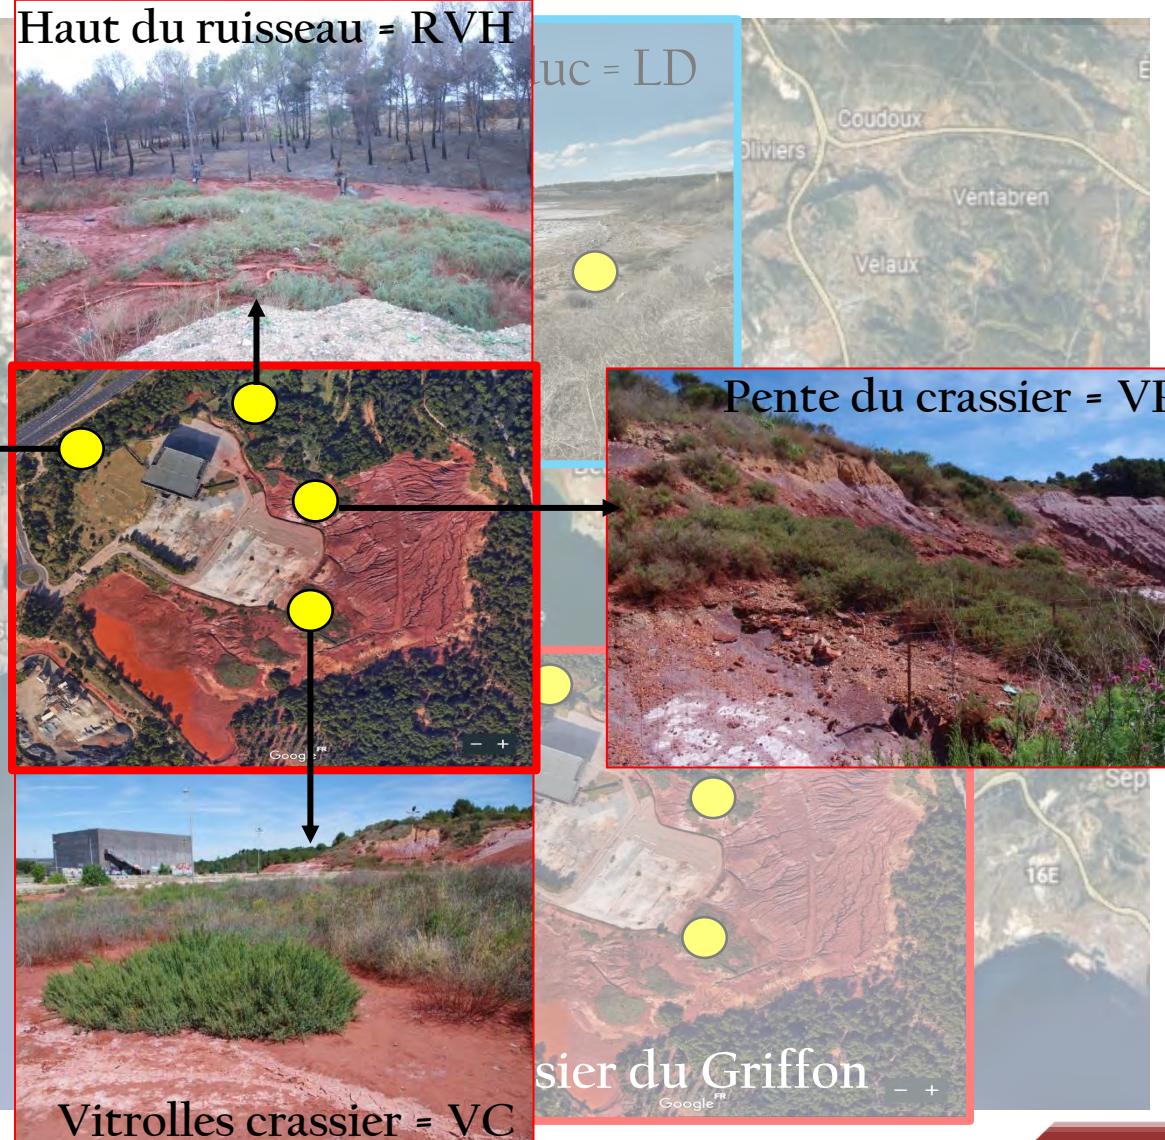

Sites and sampling

- 3 sites -> 6 plots
- *Suaeda vera* plants = 1 plot

Verdier et al., In prep.

Sites and sampling

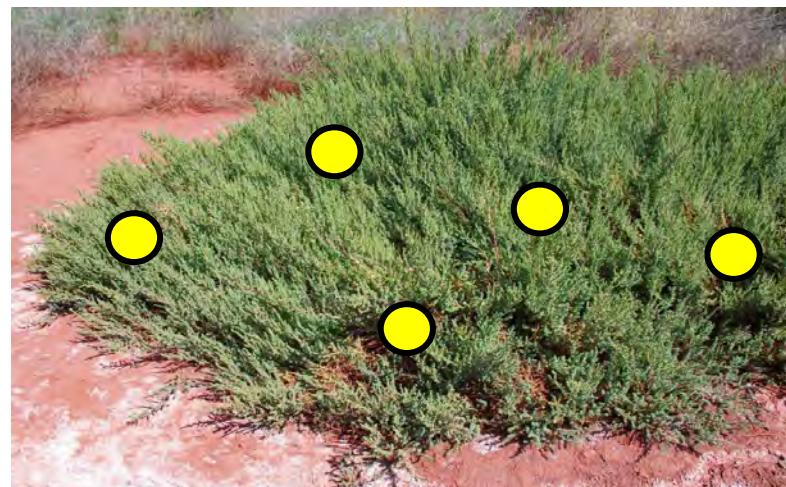

- 3 sites -> 6 plots
- *Suaeda vera* plants = 1 plot

Verdier et al., In prep.

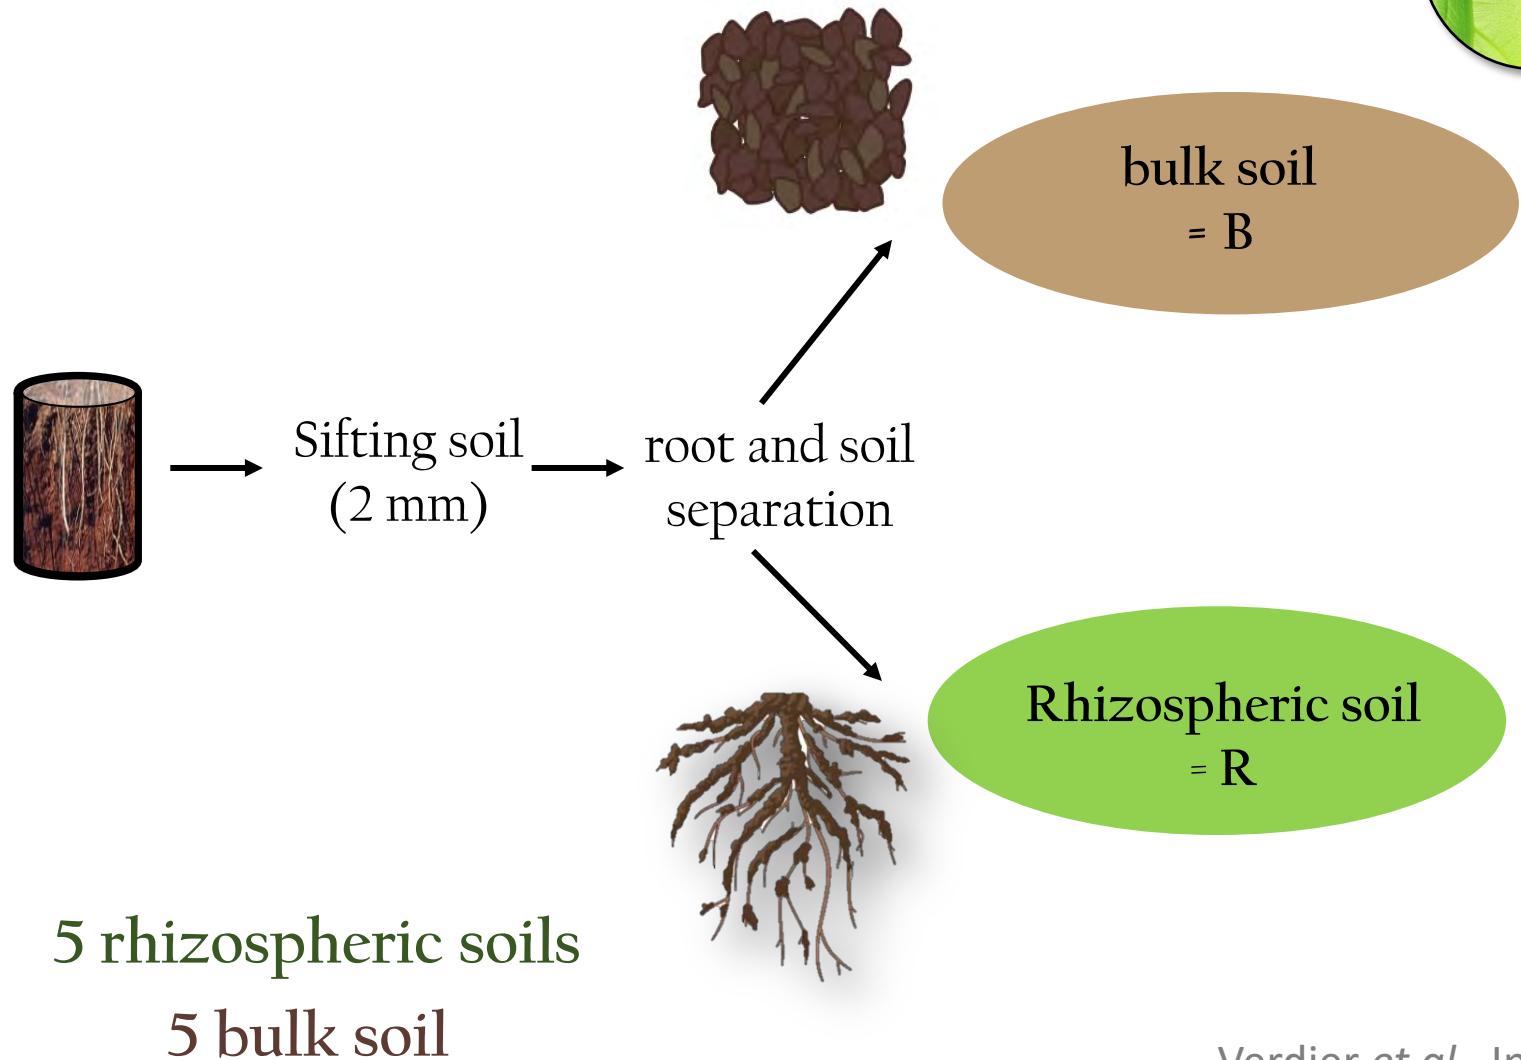

Material and Methods

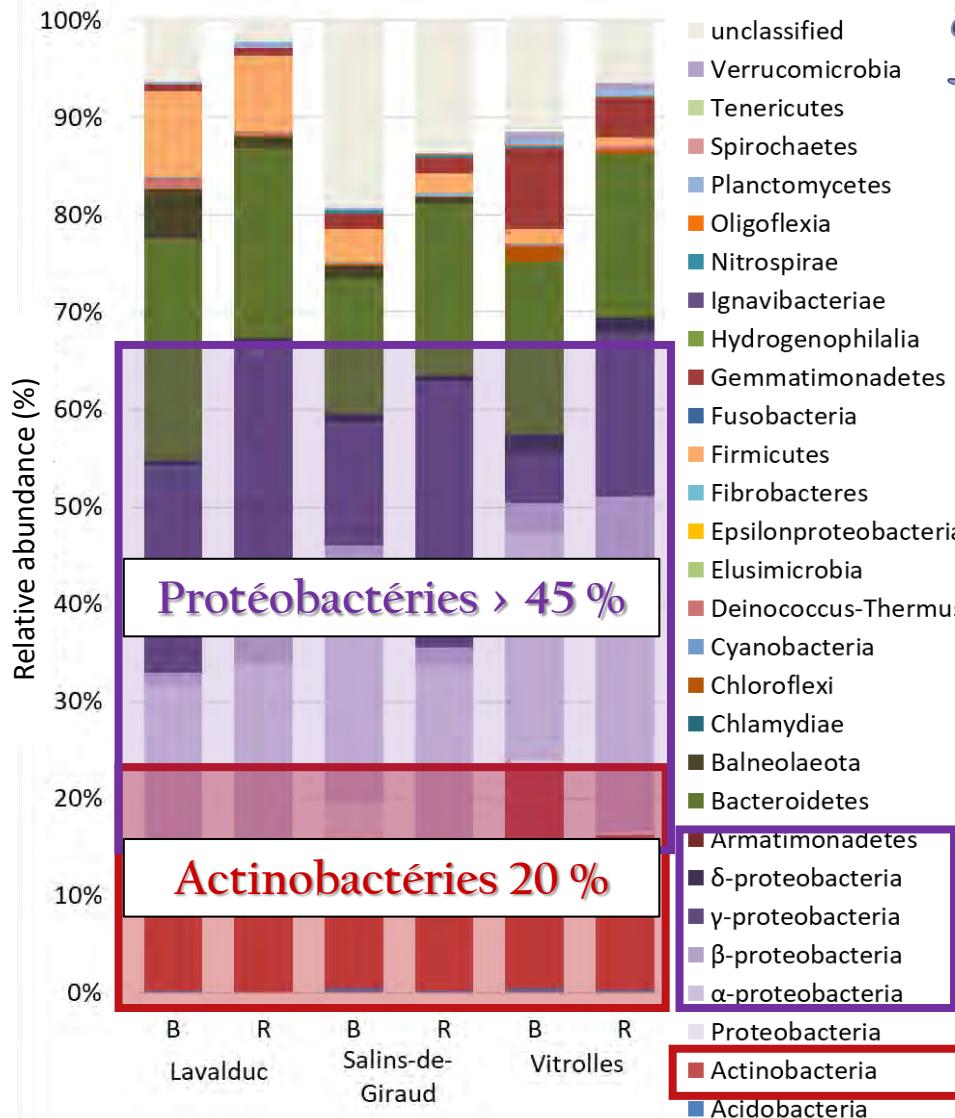

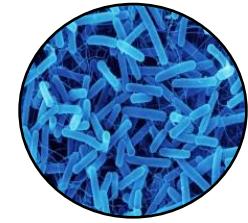

5 samples by plants

6 Plots

Verdier et al., In prep.

Bacterial phyla

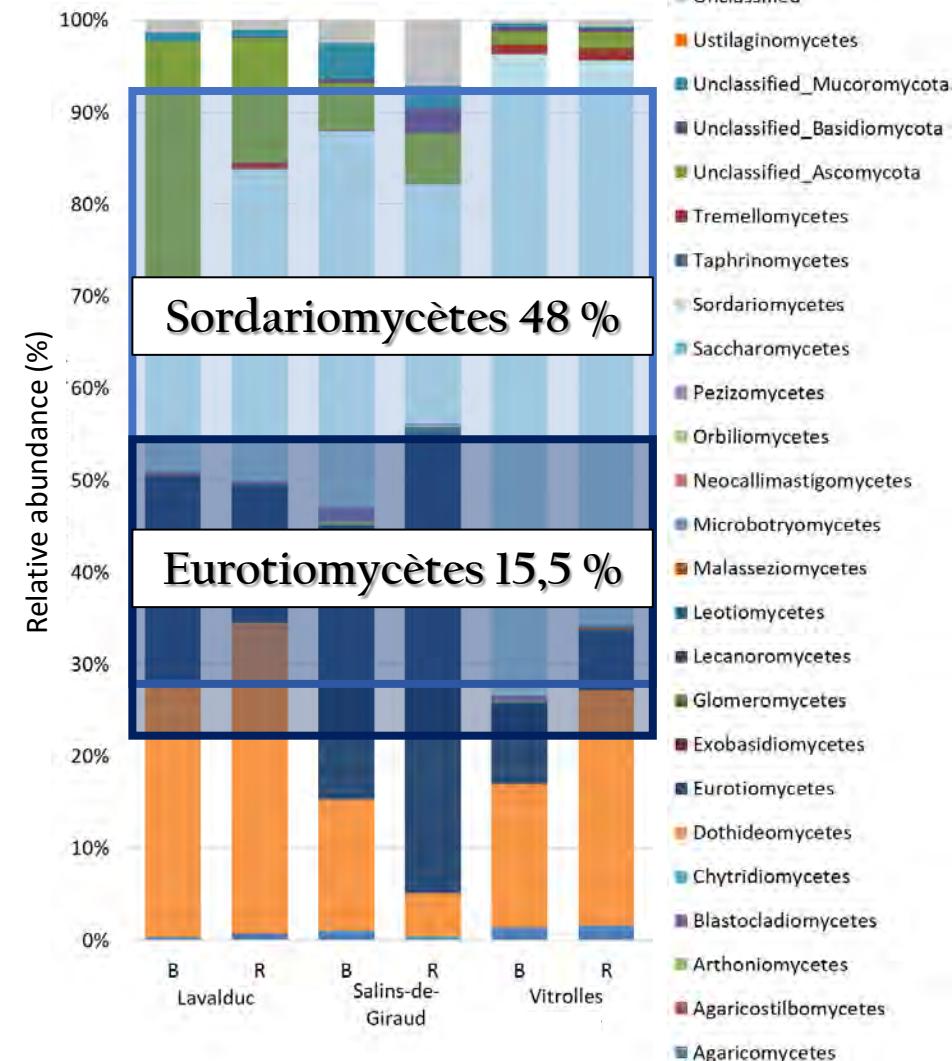

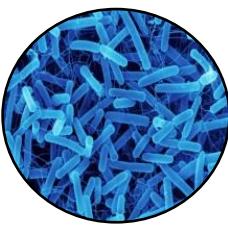

- Similar bacterial phyla
- More *Actinobacteria* at Vitrolles soil
- Bulk and rhizospheric soil dominated by *Proteobacteria*

Verdier et al., In prep.

Journées Scientifiques :
"Bauxite Résidues"

Aix-en-Provence, du 08 au 09 juin 2021

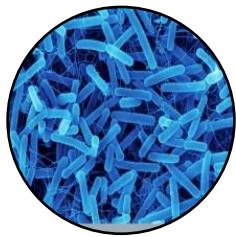

Fungal class

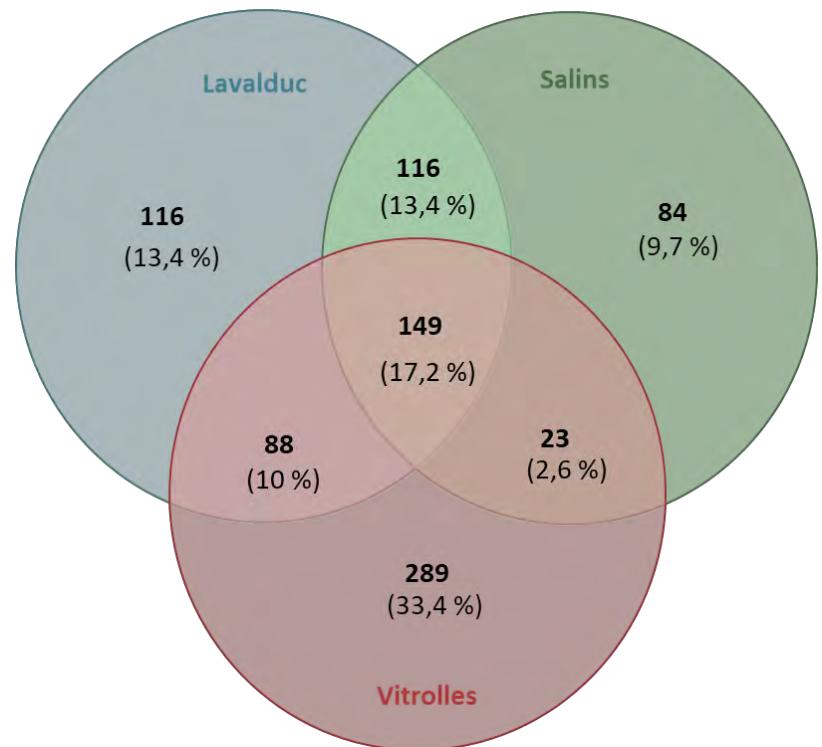

- Fungal phyla dominated by *Ascomycota* in all soils
- *Sordariomycetes* more abundant at Vitrolles soils
- *Eurotiomycetes* dominated in SG and LD soils

Verdier et al., In prep.

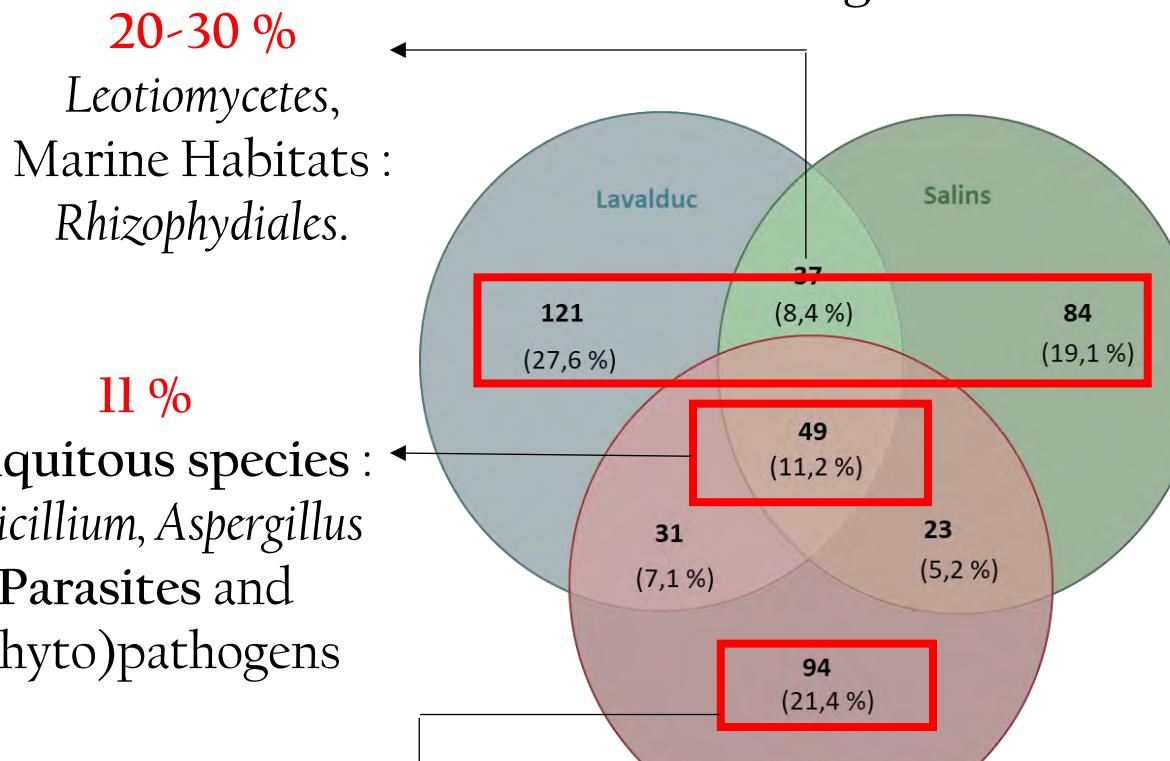

Bacteria

Fungi

20-30 %

Leotiomycetes,
Marine Habitats :
Rhizophydiales.

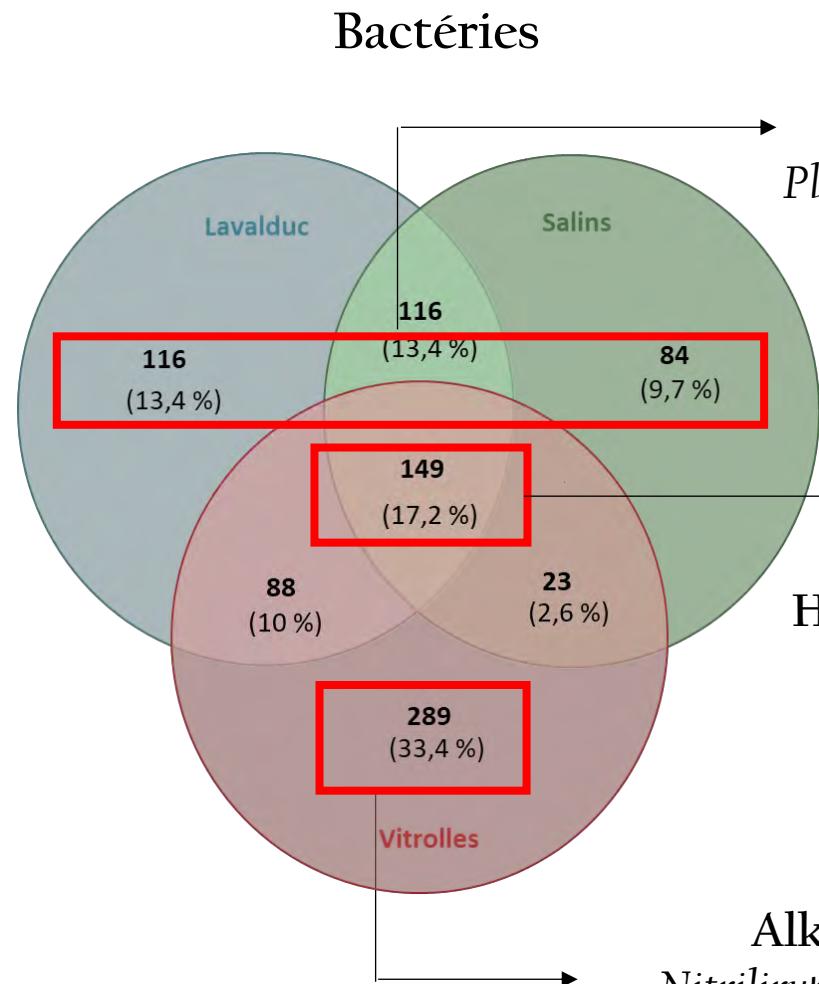

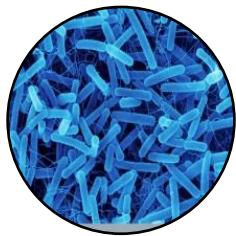

11 %

Ubiquitous species :
Penicillium, *Aspergillus*
Parasites and
(phyto)pathogens

21 %

A lot of *Pleosporales*,
Parasites and
(phyto)pathogens

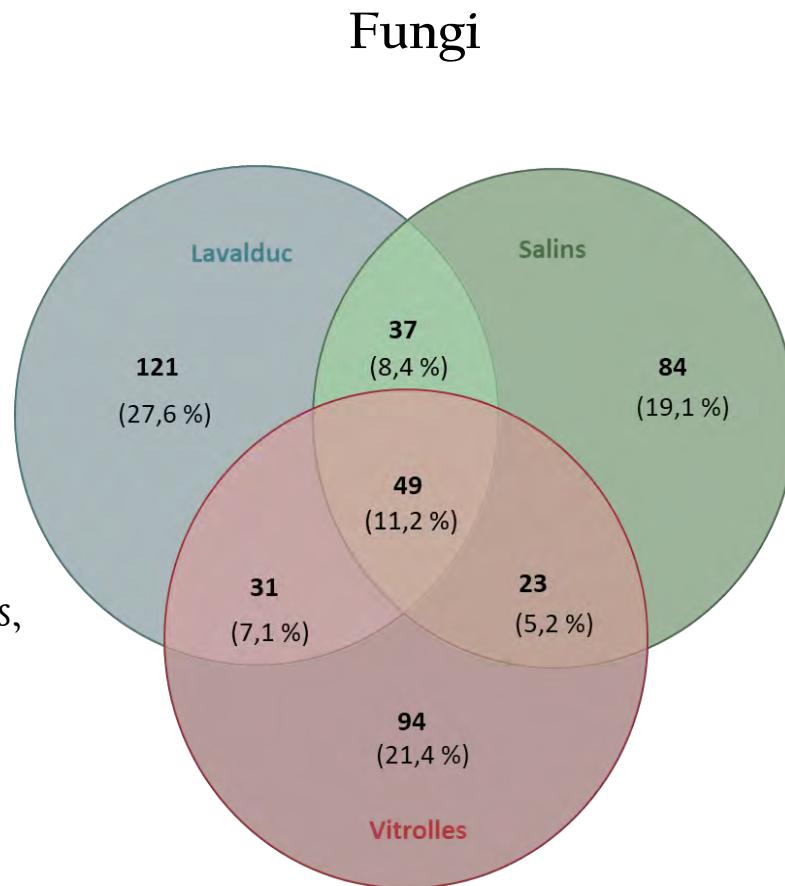

Verdier et al., In prep.

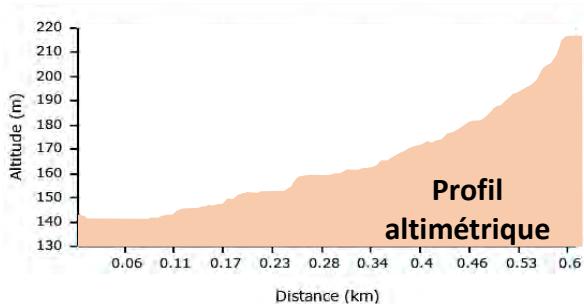

$\approx 10 \%$
Halophilic
Planktosalinus, *Balneolaceae*,
Salinimicrobium.

17%
Saprotoph: *Streptomyces*
Halotolerants : *Egicoccus halophilus*,
Halomonas sp et *Nesterenkonia*
N Fixatrice : *Mesorhizobium sp.*

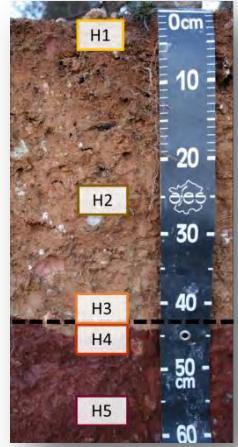

33%
Alkalophilic
Nitriliruptor alkaliphilus,
Ilumatobacter.

Conclusion

Fill soil with roots show
restoration of soil
biological functions

Red mud show more
plants and microbial
communities adapted
to Halo/ alkali soils

Red mud show similar
microbial
communities to salty
soil of salt marsh

- Addition of fill soil to restore biological functions
- And choice of plant species suitable for restoration of bauxite residues

Thanks for your attention
